## Invasion Currency

### Circulation of "Yellow Seal" Silver Certificates

Early in June the Treasury took steps to permit the circulation of "yellow seal" dollars in the United States. Yellow seal dollars were originally issued in connection with our military operations in North Africa and Europe, and are regular American currency with a distinguishing mark designed to permit segregation if needed. This distinguishing mark was provided by substituting yellow ink for blue in printing the seal on regular silver certificates of the United States. Background information on yellow seal currency is available in an article on invasion currency in the April 1945 issue of the "Treasury Bulletin", page A-3.

In order to confine the use of this currency to military operations, the Treasury originally requested banks in the United States to withhold any yellow seal dollars which came into their possession and to submit them for retirement in the same manner as unfit silver certificates are handled. In view of recent developments in connection with military operations in the European and Mediterranean areas, substantial amounts of yellow seal silver certificates are being paid out and will enter into circulation in the United States. Accordingly, on June 5, 1945 the Treasury wrote to the Federal Reserve Banks withdrawing the request to banking institutions to withhold yellow seal dollars from circulation in this country. This specially identifiable currency will hereafter be allowed to continue in circulation until it is retired in the normal course of operations as it becomes unfit for further use.

### Invasion Currency in Okinawa

On June 8, 1945 a joint press release on invasion currency in Okinawa was issued by the Treasury, War, and Navy Departments. This release is reprinted below to supplement the previous article in the "Treasury Bulletin" (April 1945) on the principal currency measures which have been carried out during this war. The previous article covered the necessity of keeping dollars from the Axis; a description of invasion currency in North Africa, Italy, France, Belgium, Netherlands, Luxembourg, Germany, and the Pacific Theatre; and the problem of who will redeem such currency.

"United States Army and Navy forces are using a supplemental military currency denominated in yen in the invasion of Okinawa and other islands of the Ryukyu group.

"This military yen currency has been issued in seven denominations, namely, 10 and

50 sen and 1, 5, 10, 20, and 100 yen. There are 100 sen to the yen. The notes in denominations of 10 sen, 50 sen, and 1 yen are one-half the size of the U. S. dollar currency. The 5 yen and 10 yen denominations are somewhat larger than the sen notes, and 20 yen and 100 yen notes are the size of the U. S. dollar note.

"The notes bear on their face the words 'Military Currency' in English and in Japanese and on the reverse side the legend 'Issued Pursuant to Military Proclamation' in both languages.

"Military yen will supplement the local currency; not replace it. This supplemental military yen, other legal tender local currency, and notes of the Bank of Taiwan and of the Bank of Chosen are interchangeable within the area without distinction at one for one. However, Japanese military yen scrip is not, of course, accepted by U. S. forces. Supplemental military yen currency notes were produced in the United States for the military commander who in the areas occupied by the forces under his command has all the powers necessary for carrying out governmental functions, including the right to establish and maintain an adequate and effective circulating medium. This is in accordance with International Law, the Hague Conventions, and decisions of the Supreme Court of the United States.

"No general rate of exchange between the yen and the dollar has been established. For pay of troops and military accounting purposes, however, a provisional basis of 1 yen to 10 cents is being used. This provisional rate was determined in the light of prevailing conditions in the Ryukyu Islands and does not prejudice the determination of the rate for other Japanese areas yet to be invaded.

"Arrangements have been made whereby U. S. Military and Naval personnel may remit in dollars to the United States at the above rate all or any portion of their pay which they received in yen. U. S. soldiers and sailors leaving the area may exchange yen currency held by them for dollar currency. When U. S. forces use yen for military expenditures, the relevant Army and Navy appropriations will be charged for the dollar equivalent thereof. In this manner the control of the Congress over the expenditures of the U. S. forces is maintained."

## Treasury Market Financing

Historical details of Treasury market financing operations involving bonds, notes, and certificates of indebtedness, beginning with the Third War Loan, are published in the tables on pages 31 and 32. Details of weekly Treasury bill offerings are shown on pages 33 and 34.

### Results of May Refunding

A total of \$4,910 million of securities maturing or called for redemption on June 1, 1945 were turned in on exchange for the 13-month 0.90% Treasury notes offered to the holders on May 21. This included approximately 88% of the 7/8% certificates of indebtedness which matured June 1, 1945, and 96% of the 1-1/2% Home Owners' Loan Corporation bonds called for redemption on June 1, 1945. The new notes are dated June 1, 1945 and mature July 1, 1946. Details of the exchange are

shown in the following table.

Maturing issue	Amount out-standing (In millions of dollars)	Amount ex-changed	Percent ex-changed
7/8% certificates of indebtedness due 6/1/45.....	4,770	4,187	88

### Federal Land Bank Bonds

As of June 1, 1945, the twelve Federal land banks called for redemption on July 1 all outstanding consolidated Federal Farm Loan 3% bonds of July 1, 1945-55. These bonds, dated July 1, 1935, were outstanding in the amount of \$230 million. The Treasury Department, and the Federal Reserve Banks and their branches, were designated by the Federal land banks as redemption agencies for the called bonds.

In a preliminary announcement of the redemption of the July 1, 1945-55 issue, it was stated that funds for the payment of the bonds would be

obtained mainly from short-term borrowings which would be repaid from the proceeds of a public offering of consolidated Federal Farm Loan bonds at a later date.

This is the second redemption at first call date of consolidated Federal Farm Loan bonds in 1945; the previous redemption being that of the 3-1/4% bonds of May 1, 1945-55, in the amount of \$157 million on May 1. Funds for this redemption came in part from the sale on February 1, 1945, of \$114 million of 2-1/4% consolidated Federal Farm Loan bonds of February 1, 1953-55.

1/ In the fiscal years 1935 and 1936, \$91 millions and \$554 millions, respectively, were transferred from increment on gold to the working balance for retirement of national bank notes. In this statement, however, charges for retirement of national bank notes are

reflected directly against increment on gold in the years during which the retirements were actually made. Inactive gold in the amount of \$1,087 millions for the fiscal year 1937 is considered as a part of the working balance.

1/ Treasury bills are included in interest-bearing debt figures at face amount, but for purposes of calculating the computed annual interest charge and the computed rate of interest, the discount value is used. For the purposes of computing the annual interest charge and rate of

interest on United States savings bonds, Series A-E are considered to yield 2.90% per annum and Series F is considered to yield 2.53%.

2/ Guaranteed securities held by the Treasury, and securities guaranteed as to interest only, are not included in this table.

1/ Excludes postal savings bonds, Federal Housing Administration debentures, and guaranteed securities held by the Treasury.

2/ It should be noted that callable issues appear twice in this column, once in the year of first call and again in the year of final maturity. Callable issues with respect to which a definite notice of call has been made, however, are listed as fixed maturities.

3/ Federal securities fall into three broad groups with respect to im-

position of Federal income taxes on income derived therefrom.

"Wholly" tax-exempt securities are exempt from both the normal and surtax rates. "Partially" tax-exempt securities are exempt from the normal rates except that in the case of partially tax-exempt Treasury and savings bonds, interest derived from \$5,000 of principal amount owned by any one holder is also exempt from the surtax rates. "Taxable" securities are subject to both normal and surtax rates.

e Less than \$50,000.

<sup>1/</sup> At current redemption values except Series G, which is stated at par.<sup>2/</sup> Estimated, except for Series G.<sup>3/</sup> For details concerning investment yields and redemption values, see "Treasury Bulletin" for May 1945, page A-4.<sup>4/</sup> Commercial bank purchases were permitted prior to April 1, 1940.<sup>5/</sup> Est. are estimated to have aggregated about \$300 millions.<sup>6/</sup> Not yet available.<sup>7/</sup> Series A-D, sold between March 1935 and April 1941, are 10 year discount bonds sold at 75% of maturity value, yielding 2.90% per annum if held to maturity; purchases were limited to \$7,500 issue price in any calendar year and from April 1, 1940, could be made only by individuals. Series A bonds began to mature in March 1945.

For information on the approximate monthly distribution of maturities during 1945 see "Treasury Bulletin" for March 1945, page A-2.

The small amounts of matured bonds which have not been redeemed remain in the amount outstanding.

<sup>8/</sup> There were \$51.7 millions of Series A-D and E savings bonds redeemed through May 31, 1945 which had not been identified by series. For purposes of this table, it has been assumed that all of these were Series E bonds.

<sup>3/</sup> Series E, on sale since May 1, 1941, is a 10 year discount bond sold at 75% of maturity value, yielding 2.90% per annum if held to maturity; purchases are limited to \$3,750 issue price in any calendar year and may be made only by individuals.

<sup>2/</sup> Series F and G have been on sale since May 1, 1941. Series F is a 12 year discount bond sold at 74% of maturity value, yielding 2.53% per annum if held to maturity. Series G is a 12 year current income bond, sold at par, bearing interest at the rate of 2-1/2% per annum, redeemable at par on maturity or at stated prices less than par before maturity. Purchases of Series F and G combined in any one calendar year are limited to \$100,000 issue price (\$50,000 in calendar year 1941). Commercial banks were permitted to purchase Series F and G bonds during the calendar year 1944 under certain conditions ("Treasury Bulletin" for December 1944, page 36, footnote 9); and from June 18 through June 30, 1945 they will again be permitted to make such purchases, subject to the following limitations: (1) purchases of Series F and G bonds during the calendar year may not exceed the annual limit of \$100,000; and (2) combined purchases of Series F and G bonds, 1-1/2% Treasury bonds due 12/15/50, and 7/8% certificates of indebtedness due 6/1/46 may not exceed 10% of the combined amount of time certificates of deposit of individuals and non-profit corporations or associations and of savings deposits, or \$500,000, whichever may be less.

It should be noted that State figures presented in this table are not necessarily comparable with sales data by States inasmuch as bonds which have been purchased in one State may have been redeemed in another. Moreover, the figures shown in this table are based on

current redemption values, whereas the sales figures are shown at issue price. Data on redemptions by States are not available prior to October 1, 1944.

2/ Includes Series A bonds which have matured and which have been retired.

\* Less than \$50,000.

1/ These notes were originally designed to help taxpayers set aside funds with which to pay taxes and were known as Treasury savings notes. Series A notes were designed for the small and moderate taxpayer; Series B and Series C notes were intended for the large taxpayer. Under the collection system of withholding at the source, collection of the notes for Series A type savings notes disappeared and their sale was discontinued. Redemption provisions of Series A notes were relaxed to provide for the payment of interest on notes thereafter redeemed for cash (see footnote 3). Sale of Series C notes, which were designed for the investment of idle cash reserves as well as for the accumulation of tax reserves, was continued and the notes were designated Treasury savings notes.

2/ Includes matured Treasury savings notes.

2/ Series A notes, which were sold from August 1, 1941 through June 22, 1943, yield approximately 1.92% per annum. Through June 22, 1943, the notes could be redeemed for cash only at the original purchase price; since that date, the notes have been redeemed for cash at

the tax payment value current at the time of presentation. (See also footnote 1.) 1/ When the price of a security is such as to result in a negative yield, the excess of price over zero yield is given in the yield column in thirty-second.

2/ Prices represent the mean of closing bid and ask quotations in the over-the-counter market except that prices of Treasury and Housing Owners' Loan Corporation bonds for the period prior to October 1, 1939, represent closing prices on the New York Stock Exchange. When listed for the first time, beginning with October 1, 1939, dates of高 and low, in case of recurrences, are the latest dates.

3/ Market quotations reflect the yield to earliest call date as more significant when an issue is selling above par; the yield to maturity as more significant when an issue is selling at or below par. Included in the average of long-term taxable Treasury bonds.

4/ Quoted on a yield basis.

5/ For amount of this security issued on June 1, 1945, see table on "Offerings of Marketable Issues of Treasury Bonds, Notes, and Certificates" in the chapter on "Public Debt and Guaranteed Obligations of the United States Government."

6/ Not quoted on May 31. From May 23 through May 29, quoted at par, prior to maturity, quoted on basis of zero yield plus premium per thousand dollars.

7/ Called on May 18 for redemption on September 15, 1945.

8/ This is the only bond eligible to remain in the average of long-term partially tax-exempt Treasury bonds.

Excludes postal savings bonds.

9/ Excludes Federal Housing Administration debentures.

10/ Called on March 23 for redemption on June 1, 1945.

11/ No data because security was not quoted on May 31.

12/ Quoted on a yield basis.

- 1/ When the price of a security is such as to result in a negative yield, the excess of price over zero yield is given in the yield columns in thirty-seconds.  
 2/ Prices represent the mean of closing bid and ask quotations in the over-the-counter market. "When issued" prices for all securities except Federal Intermediate Credit Bank debentures are included beginning November 1, 1941. Dates of highs and lows, in case of recurrence, are the latest dates.  
 3/ Market convention treats the yield to earliest call date as more

significant when an issue is selling above par; the yield to maturity as more significant when an issue is selling at or below par.  
 4/ Quoted on a yield basis.  
 5/ Prices quoted are subject to a dealer's commission. These securities are not shown until date of issue.  
 6/ No data because security was not quoted on May 31.  
 7/ Excludes issues completely held by Farm Credit Administration agencies.

## YIELDS OF TREASURY SECURITIES MAY 31, 1945

Based on Mean of Closing Bid and Asked Quotations

*Explanation: The points represent yields to call date when prices are above par, and to maturity date when prices are at par or below. The smooth curves for the various classes of points are fitted by eye. Issues for which an exchange offer has been made or which are due or callable in less than 3 months are excluded.*

Basis of Computation: (1) Treasury bond yields are computed on the basis of the mean of closing bid and ask quotations in the over-the-counter market, beginning September 2, 1941; previously, closing prices on the New York Stock Exchange were used on days when sales took place on the Exchange in a particular issue and the mean of closing bid and ask quotations on the New York Stock Exchange on days when no sales took place. (2) Corporate bond yields are computed on the basis of closing prices on the New York Stock Exchange and the New York Curb Exchange on days when an issue does not sell, the price of the last preceding sale is used.

Back Figures: Monthly and weekly data for the period January 1933 through March 1944 appeared in the "Treasury Bulletin" for April 1944, pages 57-61.

1/ Average of Treasury bonds neither due nor callable for fifteen years. For discussion of composition of average see "Treasury Bulletin" for March 1944, page 58. Partially tax-exempt bonds are those the interest on which is exempt from the normal rates of the Federal income tax, except that in the case of partially tax-exempt Treasury and United States savings bonds, interest derived from

2/ For discussion of present composition of high-grade corporate bond yields, see "Treasury Bulletin" for January 1945, page 56; for discussion of its previous composition, as well as the considerations underlying its construction, see "Treasury Bulletin" for April 1943, page 51.

3/ Monthly averages of daily figures. Prior to April 1, 1938, corporate bond yields are averages of Saturday figures.

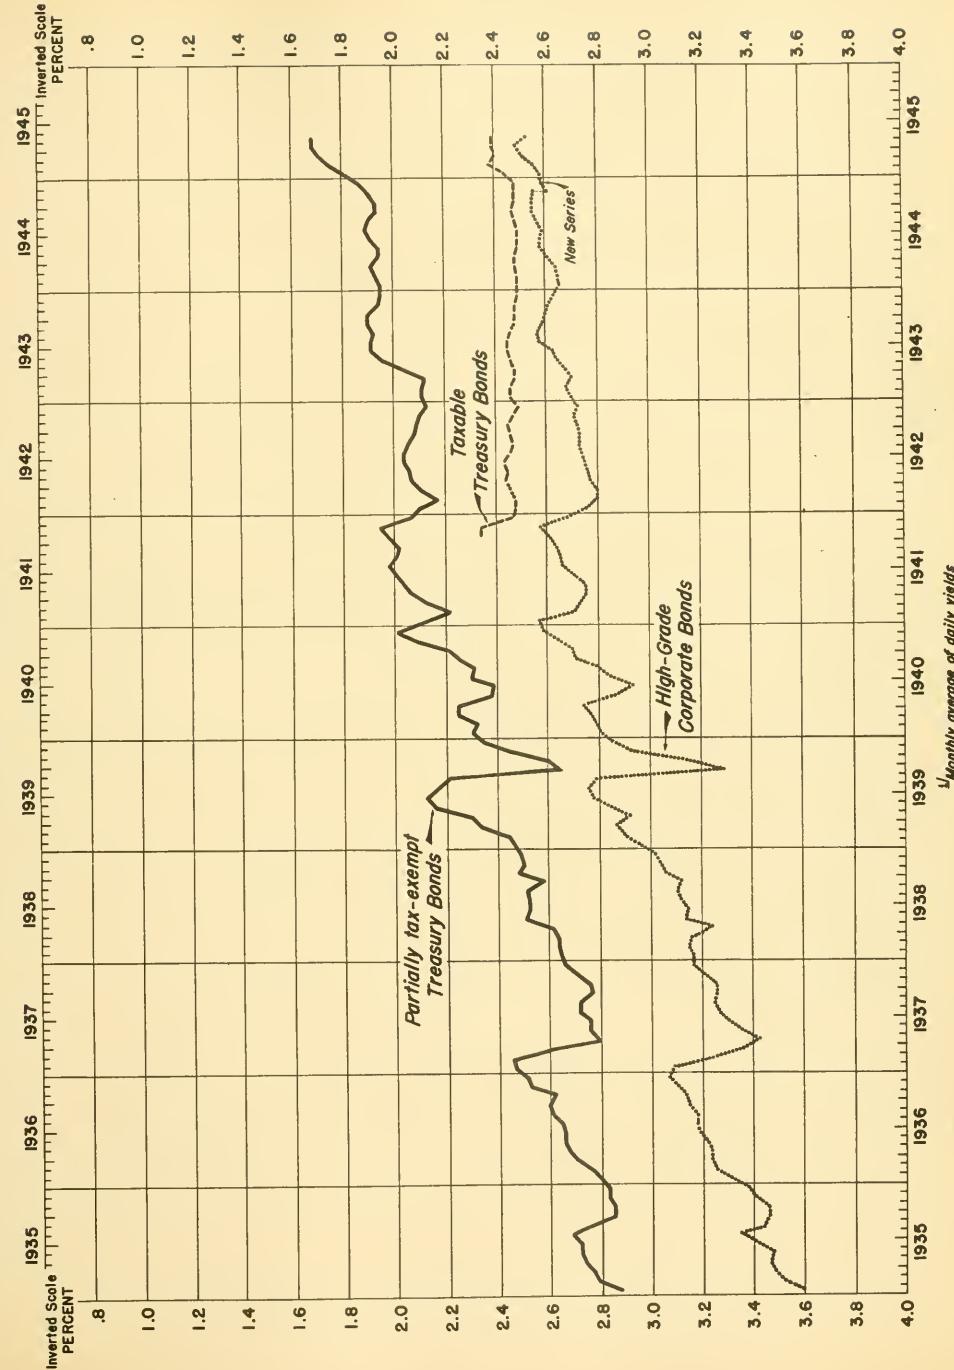

4/ The composition of the high-grade corporate bond average was revised commencing with November 1, 1944. The old average for November 1944 was 2.56%. See footnote 2.

5/ On days when the exchanges are closed, the date and price of the previous day are used.

6/ Indicates change in composition of average.
