Section II, Table 1.

4/ Includes only expenditures from appropriations made specifically for administrative expenses relating to the Social Security Act; namely, Social Security Board, Department of Commerce, and Department of Labor; and administrative expenses reimbursed to the General Fund of the Treasury under Section 201 (f) of the Social Security Act, as amended. 1/ In the fiscal years 1935 and 1936, \$91 millions and \$554 millions, respectively, were transferred from increment on gold to the working balance for retirement of national bank notes. In this statement, however, charges for retirement of national

bank notes are reflected directly against increment on gold in the years during which the retirements were actually made. Inactive gold in the amount of \$1,087 millions for the fiscal year 1937 is considered as a part of the working balance.

1/ This is the net budgetary deficit. Excludes amounts for public debt retirement which are chargeable to the sinking fund, etc., under special provisions of law.

2/ This represents the increase in the gross public debt, except as noted. (See footnote 1/.)

3/ Includes Federal Old-Age and Survivors Insurance Trust Fund, Unemployment Trust Fund, Railroad Retirement Account, Government insurance and retirement funds and other trust funds.

4/ Comprises Public Works Administration revolving fund and special deposits (net). Also includes Agricultural Marketing Administration commodity food stamp transactions.

5/ Includes expenditures for retirement of national bank notes.

6/ In the fiscal years 1935 and 1936, \$91 millions and \$554 millions were transferred from increment on gold to the working

balance for retirement of national bank notes. In this statement, however, charges for retirement of national bank notes are reflected directly against increment on gold, in the years during which the retirements were actually made. Inactive gold in the amount of \$1,087 millions for the fiscal year 1937 is considered as a part of the working balance general and special accounts for the purpose of this table.

1/ Expenditures for the retirement of national bank notes from increment on gold for the fiscal years 1935 to 1939 (as shown below) are not reflected herein, but are reflected under increment on gold as follows: 1935 - \$91 millions, 1936 - \$397 millions, 1937 - \$99 millions, 1938 - \$51 millions, and 1939 - \$5 millions, total - \$645 millions. The increases in the public debt shown in the table Means of Financing Cash Requirements for the above fiscal years will not agree for the reason stated above.

* Less than \$50,000.

1/ These notes were originally designed to help taxpayers set aside funds with which to pay taxes and were known as Treasury tax savings notes. Series A notes were designed for the small and moderate taxpayer; series B and series C notes were intended for the large taxpayer. When the collection of taxes through withholding at the source commenced, the need for series A tax savings notes disappeared and their sale was discontinued. Redemption provisions on series A notes were relaxed to provide for the payment of interest on notes thereafter redeemed for cash (see footnote 2/). Sales of series C notes which were designed for the investment of idle cash reserves as well as the accumulation of tax reserves was continued and the notes were designated Treasury savings notes.

2/ Series A notes, which were sold from August 1, 1941 through June 22, 1943, yield approximately 1.92 percent per annum. Through June 22, 1943 the notes could be redeemed for cash only at the original purchase price; since that date, the notes have been redeemed for cash at the tax payment value

current at the time of presentation. (See also footnote 1/.) Prior to October 4, 1943, the maximum amount which could be used in payment of each class of tax (income, estate, or gift) by each taxpayer during each taxable year was limited to \$5,000 par value; this limitation was removed as of that date.

3/ Series B notes were sold from August 1, 1941 through September 12, 1942, to yield approximately .48 percent per annum. The amount which may be turned in on taxes is unlimited. The notes may be redeemed for cash only at the original purchase price.

4/ Series C notes went on sale September 14, 1942. Interest accrues each month on a graduated scale (see "Treasury Bulletin" for August 1943, page 4) to yield approximately 1.07 percent per annum if held to maturity. These notes may be used in payment of Federal taxes at any time two months after the date of issue. The amount which may be turned in on taxes is unlimited. The notes may be redeemed for cash six months after the date of issue at the tax payment value current at the time of presentation. Prior to July 27, 1943, notice of 30 days was required for cash redemption. See also footnote 1/.

Source: Daily Treasury Statements commencing November 1, 1942; prior thereto, Post Office Department.

1/ Figures for November 1942 and following months are not strictly comparable with earlier months because of the shift to a Daily Treasury Statement basis. Stamps sold prior to October 1, 1942 were known as postal savings stamps and were obligations of the Postal Savings System but subsequently became public debt obligations.

2/ Estimated on the basis of samples conducted by the Post Office Department.

3/ Includes minor amounts which were exchanged for postal savings

certificates prior to November 1, 1942. These did not aggregate in any one month more than \$26 thousands nor more than 0.9 percent of total redemptions.

4/ Sales and redemptions commence with May 1, 1941 when the special defense series of stamps went on sale. The amount of the old series of postal savings stamps outstanding on April 30, 1941 was \$150 thousands. Details not available for May, June, and July 1941.

5/ Net of sales less redemptions. See footnote 1/.

6/ Does not include amounts transferred from Postal Savings System to the Treasury to cover outstanding stamps.

**Summary Data from Treasury Survey of Ownership of Securities
Issued or Guaranteed by the United States, November 30, 1943**

The following tables present summary data from the Treasury survey, as of November 30, 1943, of the ownership of securities issued or guaranteed by the United States. The large commercial and savings banks and insurance companies covered in the survey account for approximately 95 percent of the holdings of United States Government and Government-guaranteed securities held by all banks and insurance companies in the United States.

Note: Commencing with the Treasury survey as of November 30, 1943, which is shown below, the nomenclature "mutual savings banks" has been changed to "savings banks". This change reflects a more nearly correct designation of the nature of the banks included in this category without measurably affecting the comparability of the two classifications.

1/ When the price of a security is such as to result in a negative yield, the excess of price over zero yield is given in the yield column in thirty-seconds.

2/ Prices represent the mean of closing bid and ask quotations in the over-the-counter market. "When issued" prices are included beginning November 1, 1941. Dates of highs and lows, in case of recur-

rence, are the latest dates.

3/ Computed on mean price to call date when mean price is above par and to maturity date when mean price is below par.

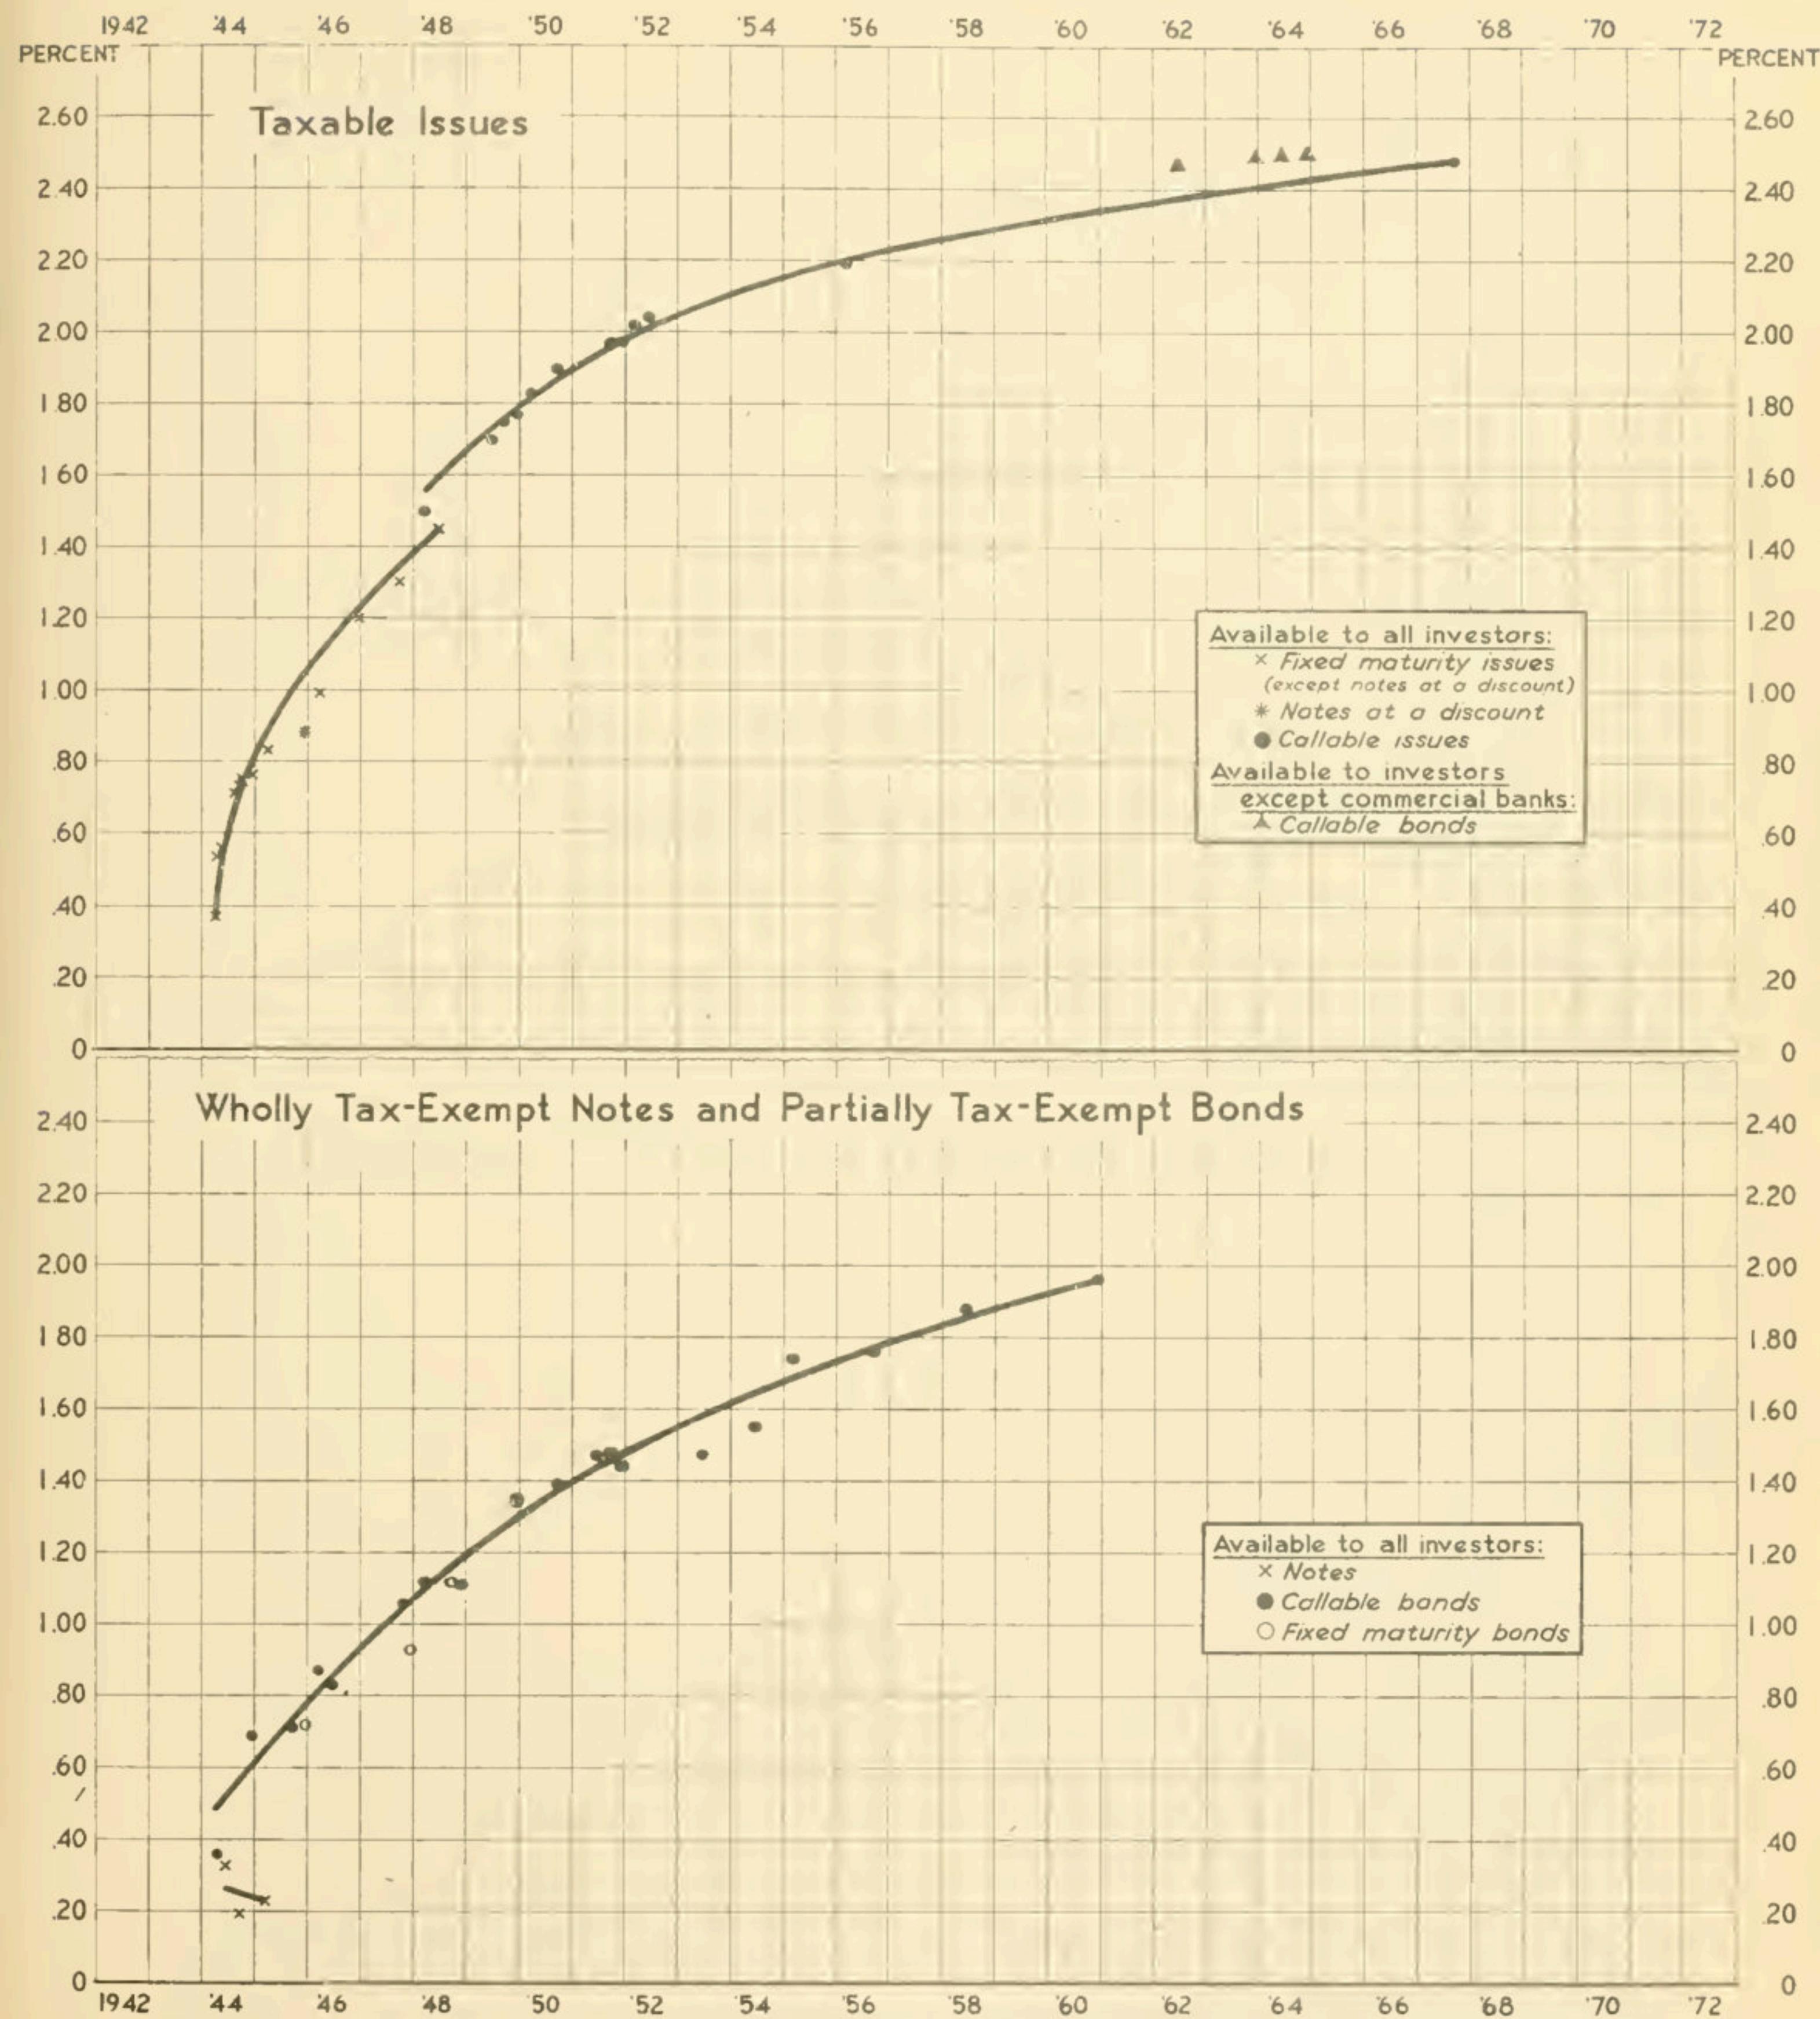

4/ Excludes issues completely held by Farm Credit Administration agencies.

5/ Taxable issues.

6/ Not quoted.

YIELDS OF TREASURY SECURITIES DEC. 31, 1943

Based on Mean of Closing Bid and Asked Quotations

Explanation: The points represent yields to call date when prices are above par, and to maturity date when prices are at par or below. The smooth curves for the various classes of points are fitted by eye. Issues for which an exchange offer has been made or which are due or callable in less than 3 months are excluded.

Basis of Computation: (1) Treasury bond yields are computed on the basis of the mean of bid and ask quotations in the over-the-counter market, beginning September 2, 1941; previously, closing prices on the New York Stock Exchange were used on days when sales took place on the Exchange in a particular issue and the mean of closing bid and ask quotations on the New York Stock Exchange on days when no sales took place. (2) Corporate bond yields are computed on the basis of closing prices on the New York Stock Exchange and the New York Curb Exchange; on days when an issue does not sell, the price of the last preceding sale is used.

Back Figures: See "Treasury Bulletin" for July 1941, pages 21-26, and subsequent issues.

Basis: Daily Treasury Statements.

1/ These items represent the difference between the cost value and the monetary value of silver bullion revalued and held to secure silver certificates.

2/ The figures in this column are not cumulative; as the amount of bullion held changes, the potential seigniorage thereon changes.

3/ Increase due principally to cumulative adjustment in computing average cost per ounce.
