

TREASURY

BULLETIN

SEPTEMBER 2021

FEATURES

- Profile of the Economy
- Financial Operations
- International Statistics
- Special Reports

Produced and Published by
Department of the Treasury
Bureau of the Fiscal Service

The Treasury Bulletin is issued quarterly in March, June, September, and December by the Bureau of the Fiscal Service, Cash Accounting and Reporting Division. Statistical data is compiled from sources within Treasury departmental offices and bureaus, as well as various other Federal program agencies.

The publication staff can be reached by electronic mail.

treasury.bulletin@fiscal.treasury.gov

Internet service subscribers can access the Treasury Bulletin in Microsoft Word or PDF format through the Bureau of Fiscal Service's home page.

Profile of the Economy

(Office of Macroeconomic Analysis)

August 18, 2021

Introduction

The U.S. economy has now expanded for four consecutive quarters, following the sharp contraction in the first half of 2020 that accompanied the beginning of the pandemic. Although the recent recession—officially dated as starting in March 2020 and ending in April 2020—was the shortest on record, it was also unprecedently severe, requiring multiple rounds of government fiscal support. Given the success of stimulus programs and vaccination efforts, the economy rose briskly in the first and second quarters of 2021 and, as of the second quarter, has now recovered all of the activity lost during the first half of 2020. Moreover, the economic outlook for the remainder of 2021 as well as 2022 remains strong. A consensus of private forecasters expects real GDP to rise by 7.1 percent at an annual rate in the third quarter, 5.4 percent in the fourth quarter, and 3.1 percent over the four quarters of 2022. These projections suggest that the U.S. economy will return close to or above trend in 2022, though the delta variant and potential future variants add uncertainty to the outlook.

Economic Growth

According to the most recent estimate of economic activity, real GDP rose 6.5 percent at an annual rate in the second quarter of 2021, picking up from the already-strong 6.3 percent pace in the first quarter.

Real private domestic final purchases (PDFP)—the sum of personal consumption, business fixed investment, and residential investment—grew 9.9 percent at an annual rate, nearly a double-digit pace despite a pull-back in residential investment in the second quarter. The advance followed an increase of 11.8 percent in the first quarter. Combined, both quarters produced the strongest growth of PDFP for any half-year since 1950—excluding the unprecedented rebound in the second half of 2020 after the initial lockdowns.

For the second consecutive quarter, personal consumption grew at a double-digit pace, despite a sharp drop in stimulus payments to households, which were mostly distributed by the end of March. Growth in real personal consumption expenditures (PCE), which accounts for about two-thirds of overall GDP, accelerated to 11.8 percent at an annual rate in the second quarter, up from 11.4 percent in the first quarter. Purchases of durable goods—a category that includes motor vehicles, household equipment and furnishings, among other items—grew by 9.9 percent. Significantly, this nearly double-digit advance followed a surge of 50.0 percent in the first quarter, which was fueled by two rounds of federal Economic Impact Payments. The continued growth of durables purchases in the second quarter reflected strong consumer balance sheets, pent-up demand, and an improving labor market picture. Spending on nondurable goods—such as food and beverages purchased for off-premises consumption, gasoline and other energy goods, clothing, footwear, and other goods—remained very strong in the second quarter, increasing 12.6 percent, after a 15.9 percent jump the previous quarter. Household expenditures on services—

roughly two-thirds of PCE and the component most severely affected by the pandemic—rose 12.0 percent in the second quarter, a marked acceleration from the 3.9 percent pace in the first quarter. Even so, household spending on services in the second quarter was 3.3 percent below the level at the end of 2019. In contrast, total PCE in the second quarter stood 3.1 percent above its pre-pandemic level. Overall, real PCE growth added 7.8 percentage points to GDP growth in the second quarter.

Following three consecutive quarters of double-digit gains, growth of business fixed investment (BFI) slowed to 8.0 percent at an annual rate in the second quarter. Strong investment in equipment and intellectual property products was partly countered by an outright decline in structures investment. For four consecutive quarters, equipment investment has grown at double-digit paces—including a 13.0 percent gain in the most recent quarter—driven by strong investment spending on transportation and industrial equipment. Investment in intellectual property products rose at a double-digit pace for the third consecutive quarter, increasing 10.7 percent at an annual rate and following a 15.6 percent increase in the first quarter. In contrast, investment in structures resumed its longer-term decline, falling 7.0 percent in the second quarter, after a short-lived rebound of 5.4 percent in the first quarter. Aside from the first quarter of 2021, business structures investment has been trending lower since the fourth quarter of 2019, due to a variety of influences. Initially, structures investment was constrained by low oil prices—which shuttered many unprofitable rigs and reduced oil and gas well drilling. More recently, recovering oil prices have boosted mining structures investment, but investment in commercial structures has declined, reflecting uncertainty regarding telework, firms' need for office space, and the ongoing shift toward online, rather than on-site, retailing. Overall, the contribution of total BFI to growth declined to 1.1 percentage points, after adding 1.7 percentage points to first quarter GDP growth.

After returning to a more normal pace of accumulation in last year's final quarter, the private inventory component of real GDP registered a considerable drawdown in the first and second quarters of this year. Movements in this component of GDP tend to be volatile, and a large drawdown in one quarter can precede a large rebuild in the following quarter. However, the consecutive large drawdowns reflect recent supply-chain disruptions—like the global semiconductor shortage that has hindered motor vehicle production—as well as persistent high demand for consumer goods. In the second quarter, the change in private inventories subtracted 1.1 percentage points from economic growth, after reducing growth by 2.6 percentage points in the first quarter.

Residential investment declined 9.8 percent at an annual rate in the second quarter, subtracting 0.5 percentage points from GDP growth and only the second reduction in residential investment since the first quarter of 2019. The pull-back followed three consecutive quarters of double-digit growth. Consistent with the decline in residential investment in the second quarter, housing market indicators have softened. Single-family housing starts have decreased in four of the last seven months and, year-to-date, are down 15.5 percent since the end of 2020. Similarly, single-family permits, which signal future starts, have declined in five of the last seven months and are down 15.0 percent since December 2020. Still despite the recent retracement, starts were 5.3 percent higher and permits were up 3.9 percent relative to pre-pandemic levels. The National Association of Home Builder's confidence index has been trending lower since reaching a record

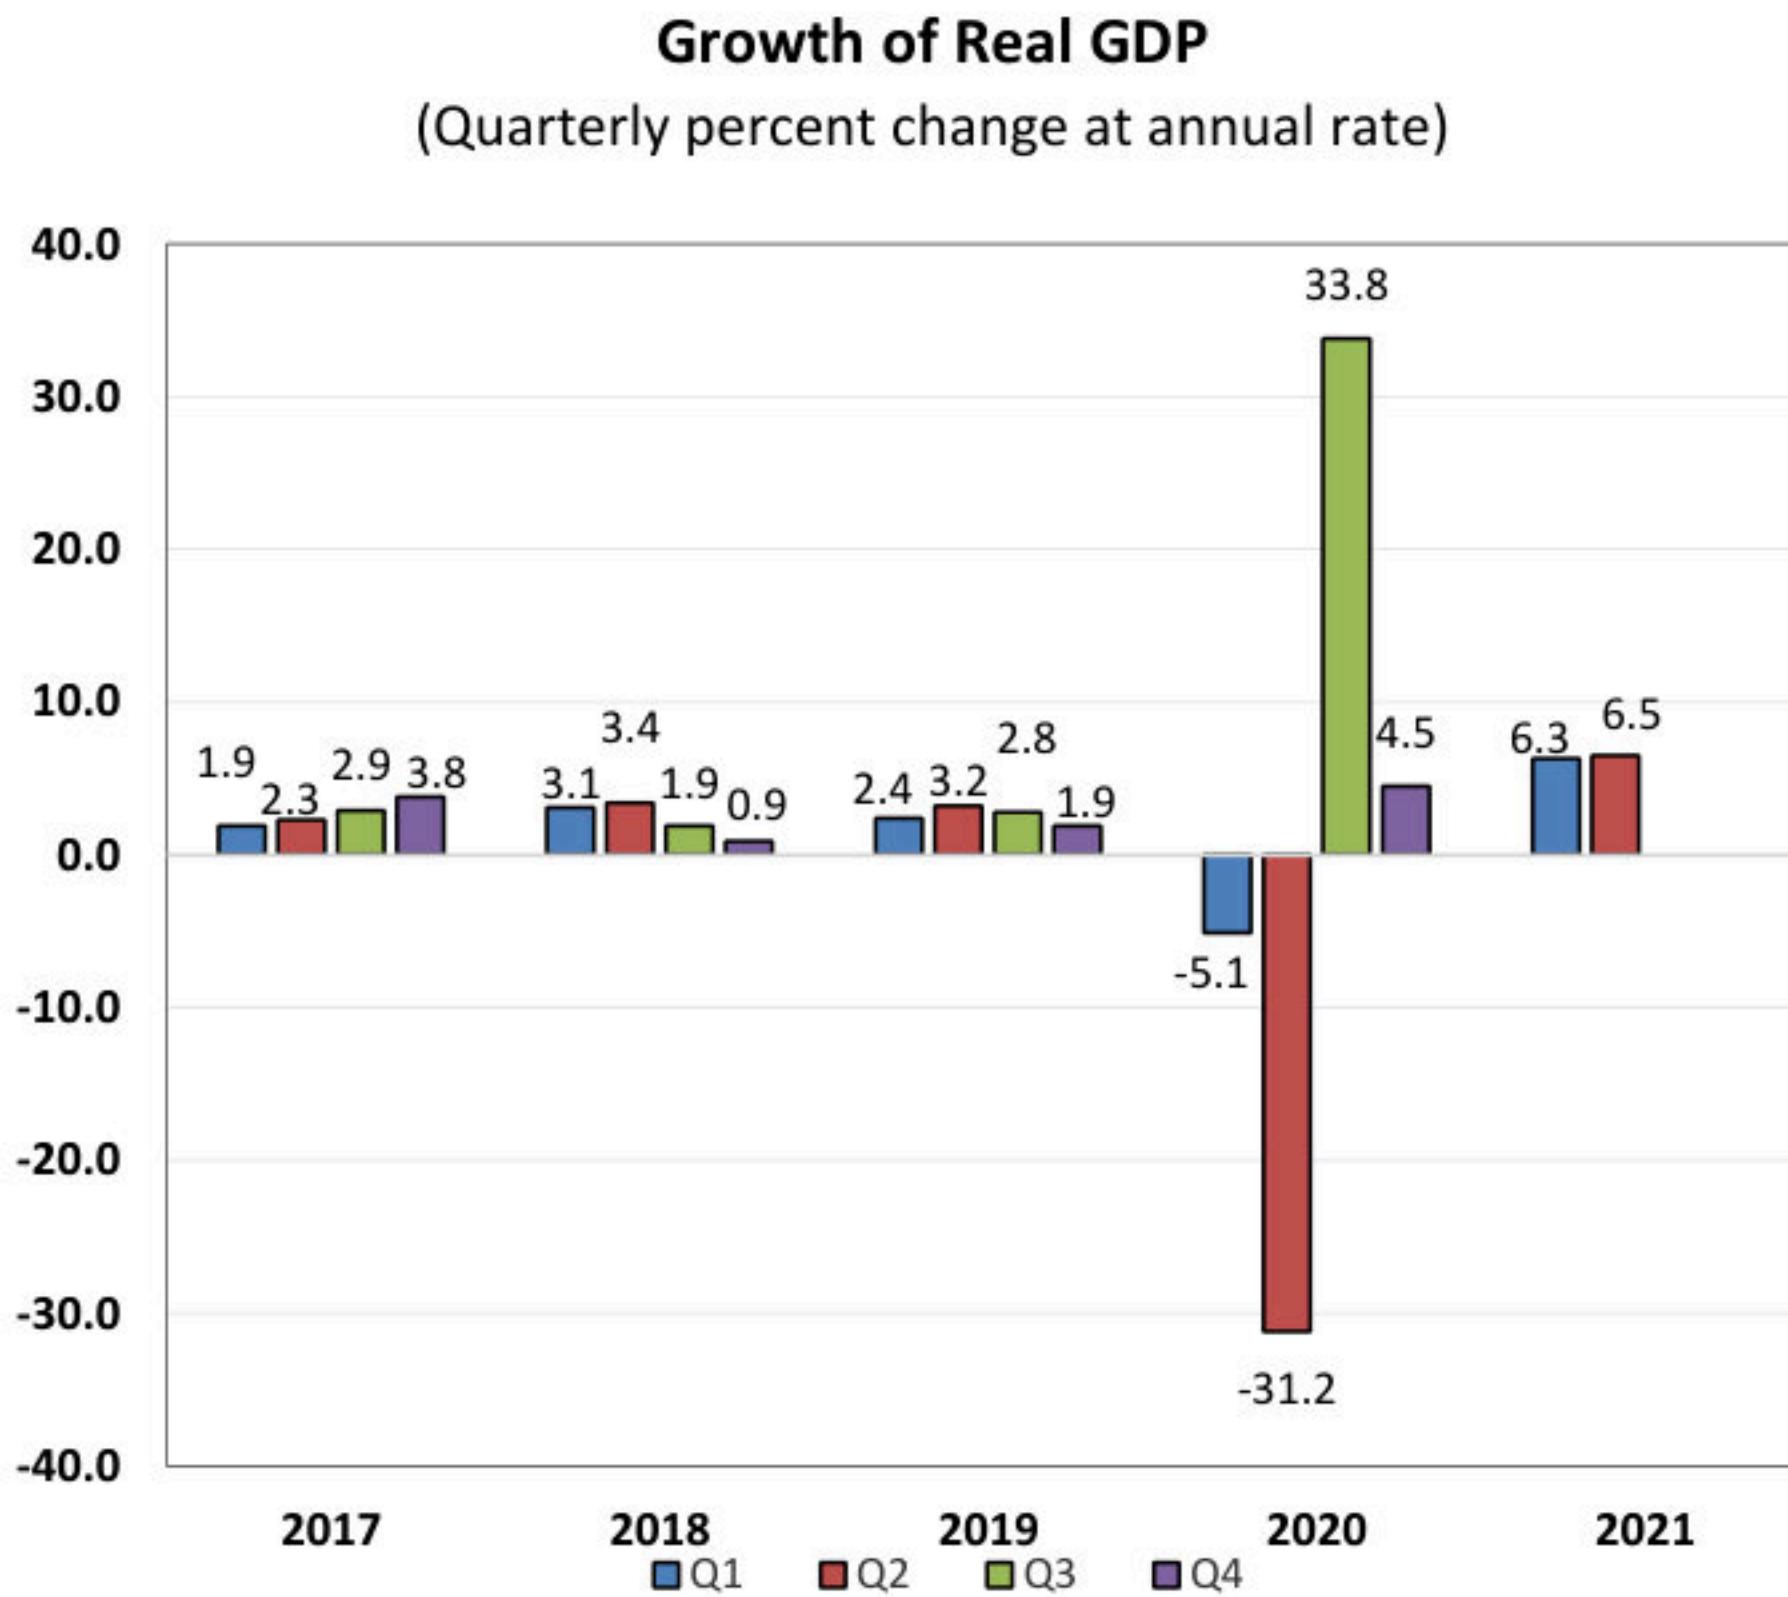

high of 90 in November 2020 but, at 81 in June 2021, remains at an historically high level, relative to the average levels of 66 in 2019 and 70 in 2020.

Demand for homes surged during the pandemic, and supply has not been able to keep pace. In June, existing home sales, which account for 90 percent of all home sales, rose by 1.4 percent and were 2.8 percent above pre-pandemic levels. After reaching a 14-year high in January 2021, new single-family home sales declined in each of the past 3 months, including a 6.6 percent drop in June. Lower home sales have largely reflected very lean inventories. At the end of June, existing home inventories were equivalent to 2.6 months of sales, down by 1.3 months from a year earlier and well below the roughly 7-month supply realtors considered a balanced market. By contrast, the inventory of new single-family home sales available for sale has moved closer to a balanced market, rising from 3.6 months' supply in January to a 6.3-month supply as of June.

The supply-demand mismatch for housing has led to brisk rates of house price appreciation, mirroring the housing boom in the 2000s and significantly impacting affordability. The Case-Shiller national house price index—which only includes existing home sales—was up 16.6 percent over the year ending in May 2021, a sharp acceleration from the 4.4 percent and 3.4 percent rates seen in May 2020 and 2019, respectively. The Federal Housing Finance Agency's purchase-only house price index, which includes new homes, jumped 18.0 percent over the year ending in May 2021, well above the 5.2 percent pace a year earlier. Despite relatively low mortgage rates—the average 30-year rate dropped to 2.80 percent at the end of July, just 15 basis points above the record low—housing affordability remains a concern.

Total government spending declined 1.5 percent at an annual rate in the second quarter, after rising by 4.2 percent in the first quarter. The overall decline occurred as a sharp pullback in federal spending offset an increase at the state and local government level. Federal spending declined 5.0 percent at an annual rate in the second quarter, after surging 11.3 percent in the first quarter, largely reflecting fewer payments of lender fees for a new round of Paycheck Protection Program loans. State and local government expenditures, in contrast, increased 0.8 percent in the second quarter as fiscal conditions continued to improve. State and local government consumption remains well below pre-pandemic levels, but fiscal relief should ensure accelerating growth in coming quarters.

The net export deficit widened moderately in the second quarter, increasing \$39.2 billion at an annual rate to \$1.26 trillion. Export growth picked up markedly from the first quarter while import growth moderated. Total exports of goods and services advanced 6.0 percent at an annual rate, more-than-reversing a 2.9 percent decline in the first quarter, reflecting stronger international demand for U.S. nonautomotive capital goods and consumer goods, as well as increased travel services that has followed the relaxation of travel restrictions. Meanwhile imports advanced 7.8 percent at an annual rate in the second quarter, slowing from the previous quarter's 9.3 percent increase. The slowdown in imports was led by fewer imports of computers and peripheral equipment, automotive vehicles and parts, and nondurable consumer goods. Imports of services, however, rebounded as more Americans traveled abroad. In the second quarter, the widening of the trade deficit pared 0.4 percentage points from GDP growth, significantly less drag than the 1.6 percentage point subtraction in the first quarter.

Labor Markets and Wages

As a result of the pandemic and measures taken to contain it, the economy lost almost 22.2 million jobs last year over March and April, including 21.4 million jobs in the private sector. Payroll job growth resumed in May 2020, and by July 2021, labor markets had reclaimed 16.7 million jobs, or nearly 75 percent of the total lost. Nonetheless, total employment was still 5.7 million persons lower than the level in February 2020. Weekly initial unemployment claims have continued to trend lower over the past several months but, as of mid-August, were still running nearly 2 times the average levels seen in January and February 2020, prior to the pandemic's onset.

The unemployment rate rose from a 50-year low of 3.5 percent in February 2020 to a post-World War II high of 14.8 percent in April 2020. Yet by July 2021, the unemployment rate had fallen 9.4 percentage points to 5.4 percent. The broadest measure of labor market slack, the U-6 unemployment rate, has also declined noticeably over the past several months yet remains above pre-pandemic levels. By July 2021, the U-6 had been cut to 9.2 percent, less than half its level in April 2020. But it remained 2.4 percentage points above the pre-pandemic low of 6.8 percent observed in December 2019. Moreover, long-term unemployment remains elevated: the share of the labor force who were unemployed 27 weeks or more stood at 2.1 percent in July 2021, or more than three times the 0.6 percent rate seen in April 2020.

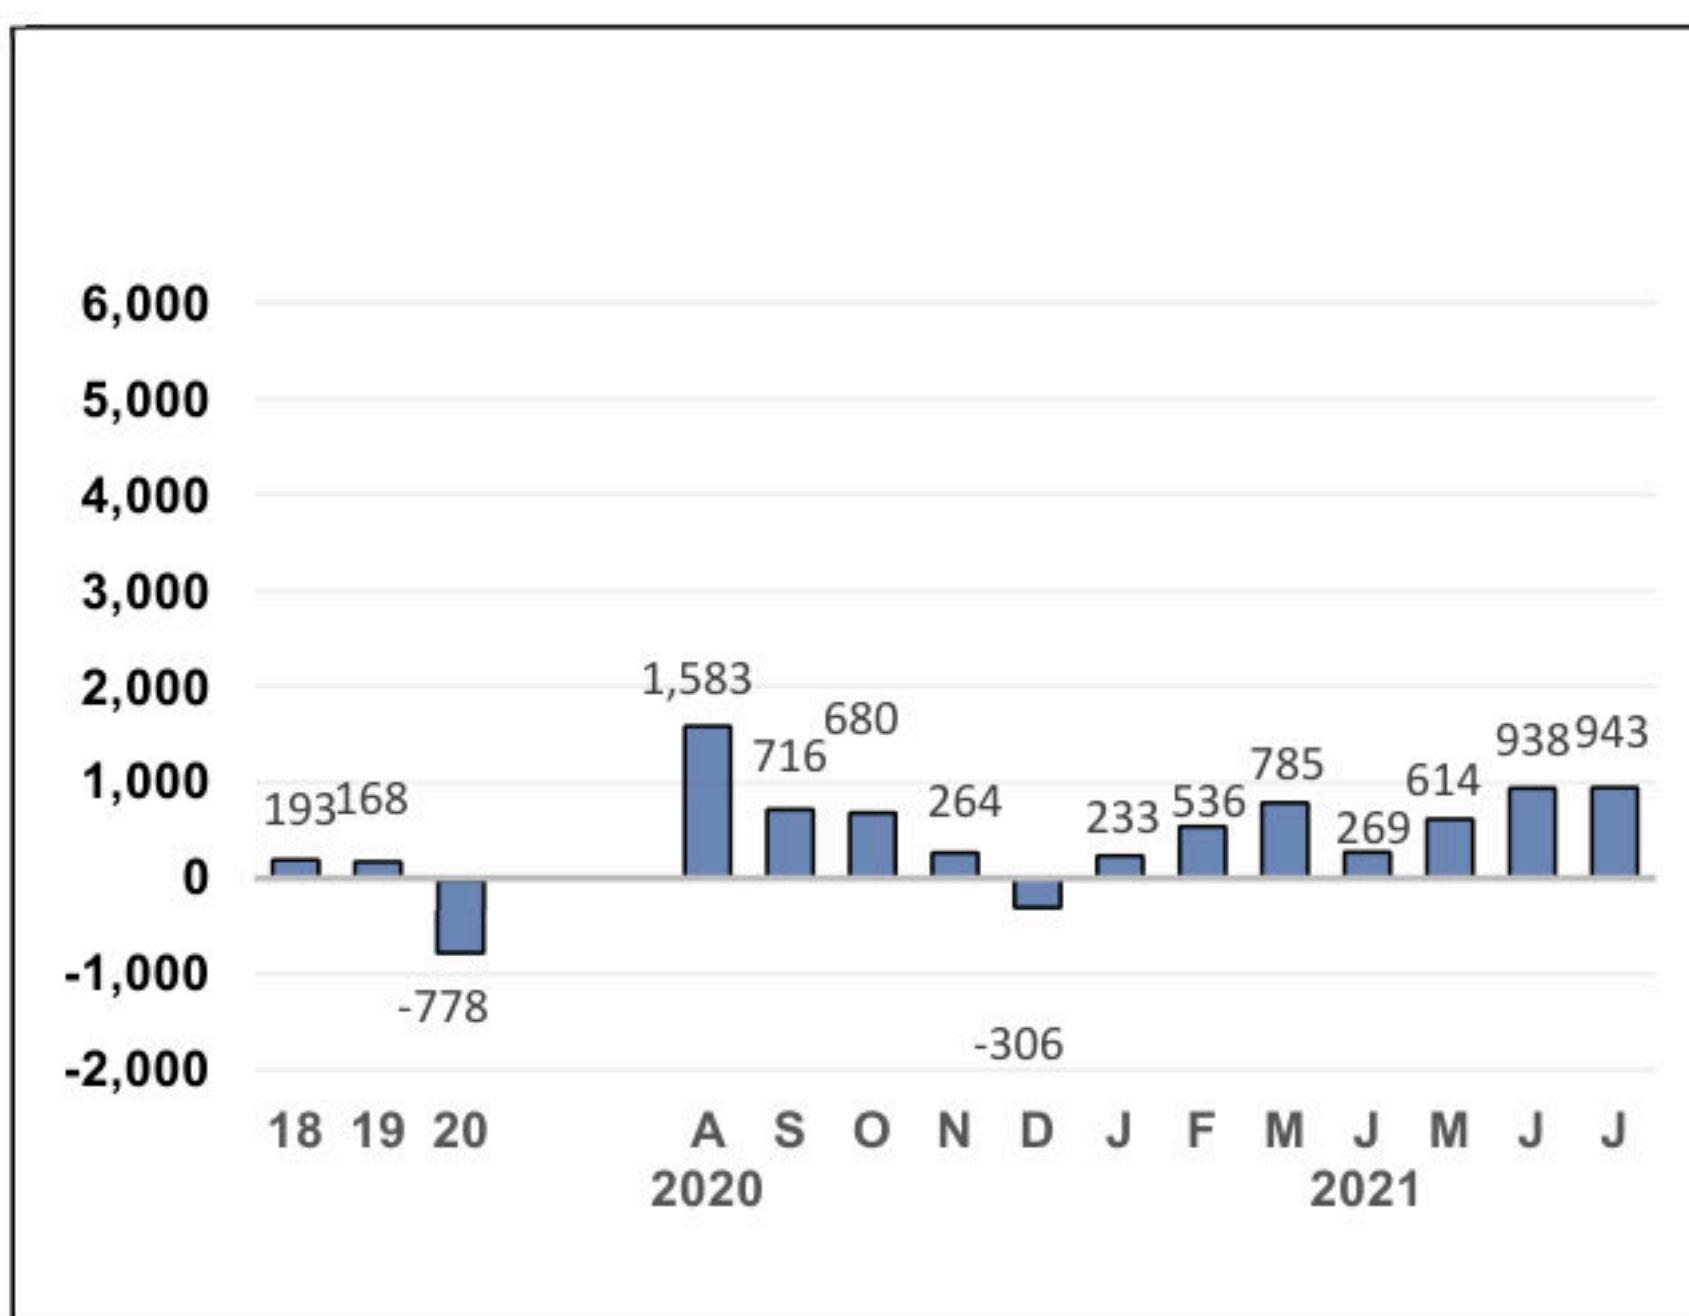

The headline labor force participation rate (LFPR)—as well as prime-age (ages 25–54) LFPR—reached multi-year highs earlier in 2020, before declining to multi-year lows in April of that year. These measures have trended higher since then. As of July 2021, the headline LFPR stood

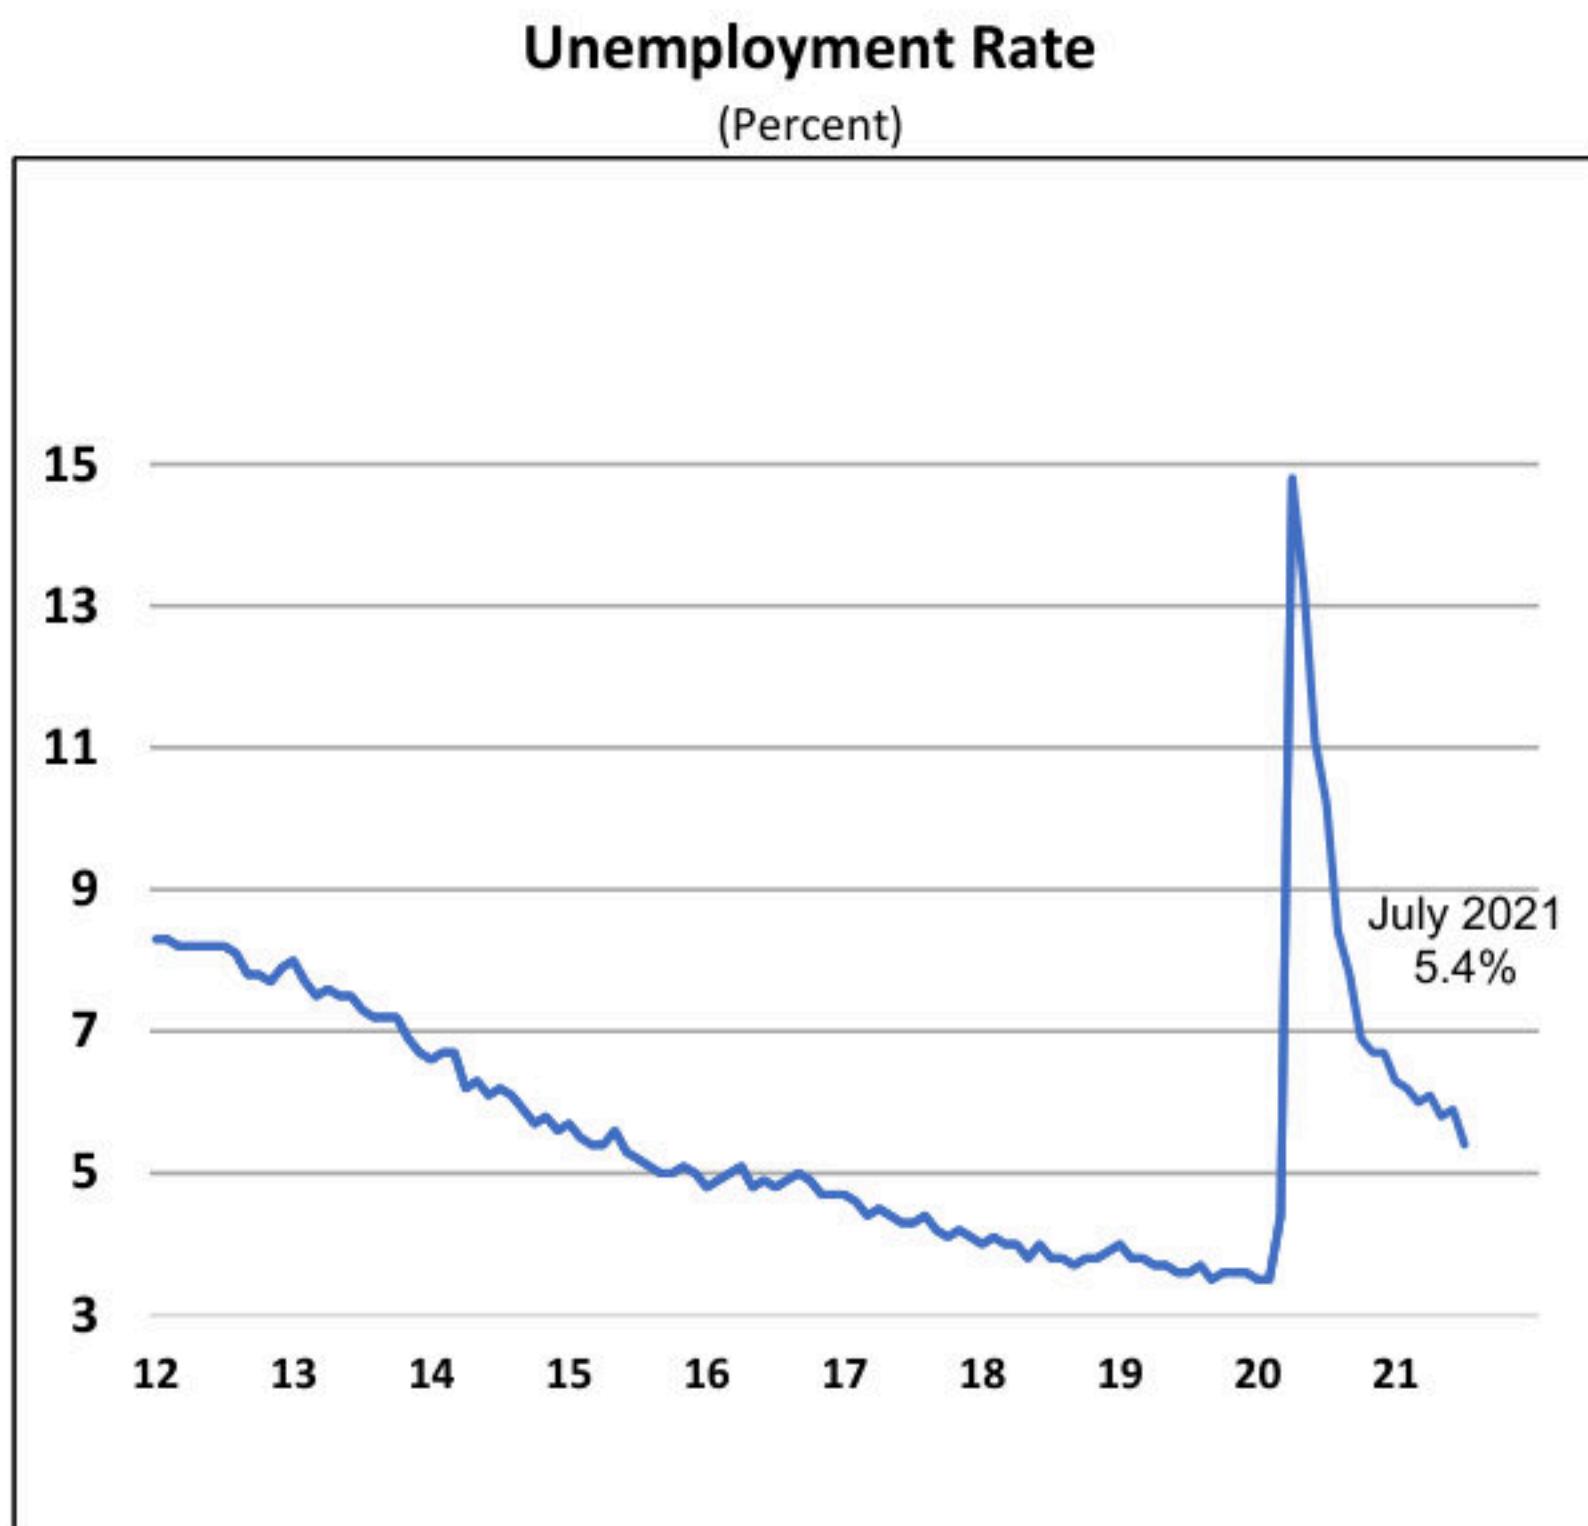

at 61.7 percent, or 1.5 percentage points above April 2020's 4½ decade low, and the prime-age LFPR was 81.8 percent, or 2.0 percentage points above April 2020's multi-decade low.

Nominal average hourly earnings for production and nonsupervisory workers grew at or above the 3 percent mark for 30 consecutive months between October 2018 and April 2021, a consistency not seen since the mid-2000s. After the onset of the pandemic, job losses were predominantly among lower-wage workers, which pushed up average wages of those still employed to a much higher range—between 4 and 8 percent. Even as the economy resumed hiring, wage gains remained elevated, in part due to continued composition effects as low-wage workers were slower to return to their jobs. Twelve-month wage growth rates averaged 5.4 percent through March 2021. Over the year through July 2021, however, nominal average hourly earnings for production and nonsupervisory workers grew 4.7 percent. An acceleration in inflation and the increasing return of lower-wage workers to jobs continued to erode real average hourly earnings, which declined 1.1 percent over the year through July 2021, a sizeable reversal from the year-earlier gain of 3.7 percent. Meanwhile, growth in wages and salaries for private industry workers, as measured by the Employment Cost Index (ECI), slowed modestly over the past year. This measure of labor cost has fewer issues adjusting for compositional changes of the labor force than do other measures. The ECI for wages and salaries advanced 3.5 percent over the four quarters ending in June 2021, accelerating from the 2.9 percent gain over the four quarters through June 2020. Aside from some volatility associated with the pandemic in 2020, year-over-year growth in the Employment Cost index held around 3 percent since mid-2018.

Payroll Employment

Monthly average for year shown and monthly amounts)

Nonfarm Productivity of Labor

For the 19 quarters through 2021 Q2, four-quarter nonfarm labor productivity growth rates have remained at or above 1 percent, a streak not seen since 2001. However, with the sudden shutdown of the economy in March 2020 and attendant labor market dislocations, quarterly productivity growth rates have reflected the unusually sharp fluctuations in output and hours worked. For example, productivity growth surged by 11.2 percent at an annual rate in the second quarter and by 4.6 percent in the third quarter. Taken together, these were the largest quarterly increases in productivity since the fourth quarter of 2009.

Although quarterly productivity declined by 3.4 percent at an annual rate in the fourth quarter of 2020, it rebounded by 4.3 percent in the first quarter of 2021, and grew 2.3 percent in the second quarter. The most recent gain in productivity reflected a 7.9 percent advance in output which more than offset a 5.5 percent increase in hours worked. Over the four quarters through 2021 Q2, productivity growth slowed to 1.9 percent from a 2.6 percent pace over the four quarters through 2020 Q2.

Nominal hourly compensation costs in the nonfarm business sector rose 3.3 percent at an annual rate in the second quarter of 2021, after increasing 1.4 percent in the previous quarter. Over the most recent four quarters, hourly compensation costs rose 2.0 percent, decelerating from the 8.8 percent, year-earlier pace. Unit labor costs, defined as the average cost of labor per unit of output, rose 1.0 percent at an annual rate in the second quarter, reversing from the 2.8 percent decline in the first quarter. These costs were up 0.1 percent over the most recent four quarters, slowing from the 6.0 percent pace over the four quarters ending in 2020's second quarter.

Industrial Production, Manufacturing, and Services

Due to the pandemic, measures of industrial production, manufacturing, and services output began declining last year in March and fell further last April. A quick recovery began in May 2020 as social distancing measures and stay-at-home orders were relaxed, although over the ensuing months, growth of output in these categories fluctuated markedly. In July 2021, industrial output at factories, mines, and utilities was up 0.9 percent. Over the 12 months ending in July, output was up 6.6 percent, in contrast with the 7.0 percent decline over the previous twelve months. Industrial output was within 0.2 percent of pre-pandemic levels.

Manufacturing production, which accounts for about 75 percent of all industrial output, increased 1.4 percent in July and was 7.4 percent higher over the past year, after a 6.4 percent decline over the previous twelve months. Relative to its pre-pandemic level, manufacturing output is 0.8 percent higher. Production of motor vehicles and parts has also fluctuated from month to month since the unprecedented monthly gains seen during the summer of 2020 as previously-shuttered factories reopened. This year, auto production has been constrained by a global shortage of semiconductors, such that output of motor vehicles and parts declined in the three consecutive months through June 2021. There are signs presently that the shortage is beginning to ease, and in July, production of motor vehicles and parts jumped 11.2 percent. However, production was 6.9 percent lower over the year through July 2021, due in part to base effects from the surge in production a year ago. Relative to pre-pandemic levels in February 2020, production of motor vehicles and parts is still 3.7 percent lower. Meanwhile, manufacturing output at select high-technology factories was flat in July but rose 12.1 percent over the past year and was 14.3 percent above pre-pandemic levels. Excluding motor vehicles and parts and high-technology industries, manufacturing output rose 0.7 percent in July. This measure was 8.5 percent higher over the past year and was 0.8 percent above the level in February 2020, before the onset of the pandemic.

Output at mines, which includes crude oil and natural gas extraction and accounts for 15 percent of industrial output, rose 1.2 percent in July. At the start of the pandemic, energy prices plunged, weighing on mining output; however, energy prices have been rising strongly as the economy has reopened. Over the year through July 2021, mining output was up 12.1 percent, although it is still 8.4 percent below its pre-pandemic level.

Utilities output, the remaining 10 percent of total industrial output, declined 2.1 percent in July. Weather is usually a factor contributing to swings in this sector; unseasonable weather in months often causes sharp swings in output from one month to the next. Over the 12 months through July, utilities production was down 3.8 percent.

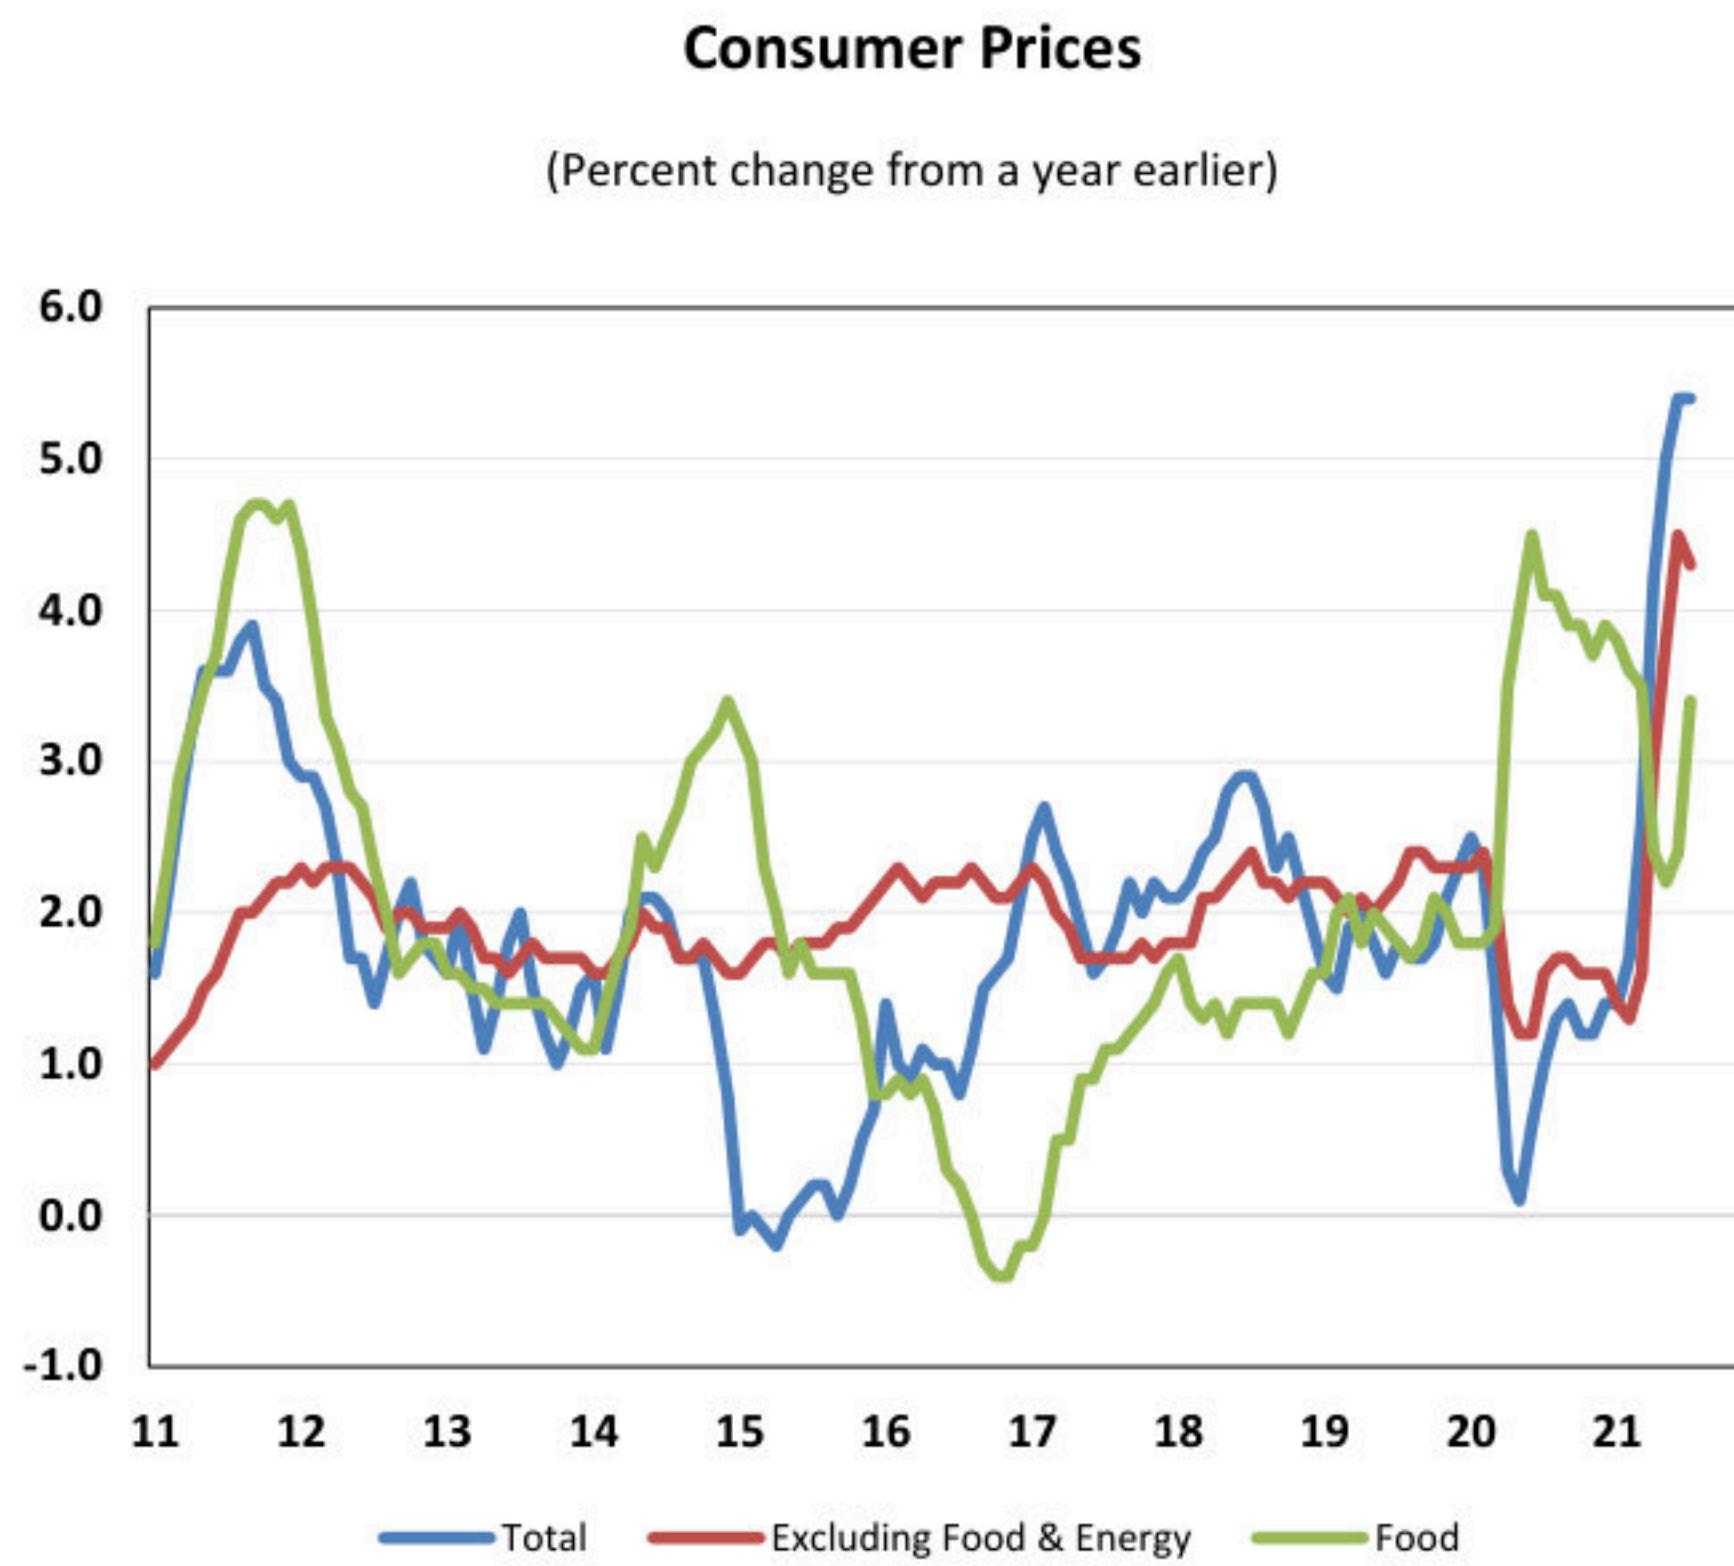

Measures of manufacturing and services business activity in the economy have recovered since summer 2020 and have signaled expansion for over a year. In March 2020 due to the pandemic, the Institute for Supply Management (ISM) manufacturing index began to signal the first multi-month contraction for the sector since early 2016. By April 2020, the index had dropped to an 11-year low. In July 2021, however, the manufacturing index stood at 59.5, indicating expansion in this sector for the fourteenth consecutive month. Similarly, the ISM's services index in April

2020 fell to its lowest level since March 2009. By July 2021, however, the index had risen to 64.1, an all-time high (series dates from July 1997), and signaling expansion for the fourteenth consecutive month.

Prices

Last year, the onset of the pandemic triggered deflationary pressures as domestic demand declined, but these pressures dissipated quickly at the headline and the core levels. Inflation readings were subdued for several months thereafter, despite rising oil prices, with 12-month readings remaining well below year-ago rates. Earlier this year, however, inflation rates rose markedly, elevated by a sharp increase in prices for used motor vehicles—due in part to supply-chain constraints—high demand for durable goods in general, and the reopening of sectors that had languished during the pandemic, such as travel, leisure, and hospitality. As some of these factors began to fade, inflation slowed in July: headline inflation was 0.5 percent, while core inflation was 0.3 percent. The slowdown in the latest month reflected flat prices for used autos and some moderation in prices for pandemic-affected sectors—though inflation for new cars, food services, and lodging remained elevated. Over the 12 months through July, CPI inflation rose by 5.4 percent, matching June's pace as the fastest 12-month pace since August 2008. Both energy and food prices have risen in recent months. The energy price index was up 23.8 percent over the year, while food price inflation was 3.4 percent over the past twelve months. Over the past 12 months, core inflation was 4.3 percent.

The headline Personal Consumption Expenditures (PCE) Price Index (the preferred measure for the Federal Open Market Committee (FOMC)'s 2 percent inflation target) showed a relatively restrained pace of inflation earlier in the pandemic, but in the past few months, it also has accelerated as the economy reopens and energy prices continue to rise. The 12-month headline PCE inflation rate was 4.0 percent through June 2021 and core PCE inflation was 3.5 percent over the year through June 2021. Prior to the 12-month reading for March 2021, inflation as measured by the PCE price index had held below the FOMC's target since November 2018, and these consistently low PCE inflation readings prompted the FOMC to adopt a more explicit inflation target strategy last year, in which the 2 percent target would be an average over time.

Consumer and Business Sentiment

After improving strongly through most of the first quarter in 2020, measures of consumer and business sentiment pulled back in March 2020 as social distancing and business closures took effect. The Reuters/Michigan consumer sentiment index rose to 101.0 in February 2020, just shy of the 14-year high reached in 2018, the subsequently fell by more than 29 points. This index trended higher for several months, reaching 88.3 in April 2021. Since then, however, this index has trended lower, and dropped sharply in early August to 70.2, or 1.6 points *below* the pandemic low reached in April 2020. The 11-point drop in early August, one of the sharpest in the survey's history, reflected renewed concerns among consumers about the impact of the delta variant on the economy. From a pre-pandemic level of 132.6 in February 2020, the Conference Board's consumer confidence index plunged by 46.9 points to 85.7 in April 2020, reaching its lowest level since mid-2014. This index fluctuated over the next several months, then began a noticeable uptrend in March 2021, and by July 2021, had risen to 129.1, only 3.5 points below its pre-pandemic level. On the business side, the National Federation of Independent Business's (NFIB) small business optimism index was, as of February 2020, only 4.3 points below its all-time high reached in August 2018. But this index fell nearly 14 points over March and April of last year to its lowest level since March 2013. Small business optimism then recovered noticeably, with the index rising to 104.0 last October (only 0.5 points below its level in February), but has since fluctuated, and stood at 99.7 as of July 2021.

Federal Budget Deficit and Debt

Before the pandemic, the Federal Government's deficit and debt were trending higher, and the fiscal response to the pandemic elevated borrowing more. At the end of FY 2020, the Federal Government posted a deficit of \$3.13 trillion (15.0 percent of GDP), up \$2.15 trillion from the \$984 billion deficit (4.6 percent of GDP) posted in FY 2019. The primary deficit (which excludes net interest payments) was 13.3 percent of GDP in FY 2020, up from 2.9 percent in FY 2019. Federal receipts totaled \$3.42 trillion in FY 2020, down \$44 billion (1.3 percent) from FY 2019. Net outlays for FY 2020 were \$6.55 trillion, up \$2.1 trillion (47.3 percent) from FY 2019. As of July 2021, the federal deficit was \$254.0 billion, bringing the 12-month total deficit to \$2.86 trillion.

Before the pandemic in 2019, the Treasury's borrowing limit was suspended until July 31, 2021. After the suspension ended, Treasury began implementing cash conservation measures to avoid exceeding the federal borrowing limit. These measures will allow the Department to meet the government's expenditures without issuing new debt—though the length of that these measures may last is subject to heightened uncertainty related to the economic impact of the pandemic. At the end of FY 2020, gross federal debt was \$26,945.4 billion. Federal debt held by the public, or federal debt less the debt held in government accounts, rose from \$16.80 trillion at the end of FY 2019 (79.2 percent of GDP) to \$21.0 trillion by the end of FY 2020, or 100.3 percent of GDP. As of July 2021, gross federal debt was \$28,427.7 billion, while federal debt held by the public totaled \$22,284.6 billion.

Economic Policy

The U.S. government has responded to the effects of the COVID-19 pandemic with a range of significant countercyclical fiscal and monetary policies, including an unprecedented level of fiscal assistance and a reduction in the key policy interest rate to near-zero.

On the fiscal side, Congress authorized a record-setting economic aid package of roughly \$2.7 trillion in March 2020, and a second, smaller package was passed in December 2020. The aid included two rounds of direct Economic Impact Payments to low- and middle-income Americans, a temporary weekly federal addition to normal state unemployment compensation, and broadened eligibility for unemployment benefits to the self-employed and gig workers. Tax payments were postponed in 2020, loan payments were delayed for borrowers of federally backed student loans, and a moratorium on evictions was instated. This slew of policies boosted disposable incomes and has helped American households to weather the pandemic.

In addition, Treasury and the Small Business Administration (SBA) launched the Paycheck Protection Program (PPP)—a forgivable loan for small businesses—less than a week after its authorization at the end of March 2020. The federal government worked directly with private lenders and used their infrastructure to hasten how quickly businesses could receive funds. In less than two weeks, the PPP had exhausted its initial funding: it had processed nearly 1.7 million loans worth \$342 billion. After a second appropriation, the PPP provided 5.2 million loans by the time of the program stopped accepting applications in August 2020, worth over \$525 billion. A third appropriation was passed in December 2020, which allowed a second draw PPP loan. As of

August 15, 2021, the PPP had processed a total of 11.5 million loans to small businesses and forgiven \$471.1 billion of borrowing.

In 2021, President Biden signed the American Rescue Plan (ARP) into law. The ARP provides an additional \$1.9 trillion in economic aid, primarily through Economic Impact Payments and direct aid to low- to middle-income families and to the economically vulnerable. It also assists state and local governments, provides additional funding for addressing COVID-19 infections and vaccinating the population, creates new loans and grants for small businesses, and extended the deadline for PPP applications.

On the monetary policy side, the Federal Reserve's Federal Open Market Committee (FOMC) resumed monetary easing in early March 2020. At the January 2020 meeting, the Federal funds rate target was at a range of 1½ to 2 percent, and in the accompanying statement, the Committee observed that at the time, "the current stance of monetary policy is appropriate to support sustained expansion of economic activity, strong labor market conditions, and inflation near the [Fed's 2 percent target]."

However, the pandemic led to an inter-meeting move. On March 3, 2020 the FOMC announced a 50-basis point cut in the target range to 1 to 1¼ percent, and on March 15, 2020 at another unscheduled meeting, the FOMC cut the target range by 100 basis points to 0 to ¼ percent. (The scheduled, March 17-18, 2020 FOMC meeting was cancelled.)

At its scheduled meetings from April 2020 through July 2021, the FOMC left the target range for the federal funds rate unchanged. In each of the accompanying statements for those meetings, the Committee noted that it expects to maintain this FFR target range until labor market conditions and the level of inflation are consistent with its maximum employment and price stability goals.

The Federal Reserve has also implemented large-scale purchases of Treasury securities and agency mortgage-backed securities. Importantly, the Federal Reserve assuaged market worries by using its Section 13(3) authority to establish numerous emergency lending facilities, leveraging capital provided by Treasury. The existence of these facilities ensured that financial markets operated smoothly and mitigated the risk of the public health crisis from becoming a financial crisis, but they were only authorized on an emergency basis through December 31, 2020. Treasury extended capital for some of these lending facilities through March 31, 2021, and these have now expired.

INTRODUCTION: Federal Fiscal Operations

Budget authority usually takes the form of appropriations that allow *obligations* to be incurred and payments to be made. Reappropriations are Congressional actions that extend the availability of unobligated amounts that have expired or would otherwise expire. These are counted as new budget authority in the fiscal year of the legislation in which the reappropriation act is included, regardless of when the amounts were originally appropriated or when they would otherwise lapse.

Obligations generally are liquidated by the issuance of checks or the disbursement of cash—*outlays*. Obligations may also be liquidated (and outlays recorded) by the accrual of interest on public issues of Treasury debt securities (including an increase in redemption value of bonds outstanding); or by the issuance of bonds, debentures, notes, monetary credits, or electronic payments.

Refunds of collections generally are treated as reductions of collections, whereas payments for earned-income tax credits in excess of tax liabilities are treated as outlays. Outlays during a fiscal year may be for payment of obligations incurred in prior years or in the same year. Outlays, therefore, flow in part from unexpended balances of prior year budget authority and from budget authority provided for the year in which the money is spent. Total outlays include both budget and off-budget outlays and are stated net of offsetting collections.

Receipts are reported in the tables as either budget receipts or offsetting collections. They are collections from the public, excluding receipts offset against outlays. These, also called governmental receipts, consist mainly of tax receipts (including social insurance taxes), receipts from court fines, certain licenses, and deposits of earnings by the Federal Reserve system. Refunds of receipts are treated as deductions from gross receipts. Total Government receipts are compared with total outlays in calculating the budget surplus or deficit.

Offsetting collections from other Government accounts or the public are of a business-type or market-oriented nature. They are classified as either collections credited to appropriations or fund accounts, or offsetting receipts (i.e., amounts deposited in receipt accounts). The former normally can be used without an appropriation act by Congress. These occur in two instances: (1) when authorized by law, amounts collected for materials or services are treated as reimbursements to appropriations. For accounting purposes, earned reimbursements are also known as revenues. These offsetting collections are netted against gross outlays in determining net outlays from such appropriations; and (2) in the three types of revolving funds (public enterprise, intragovernmental, and trust); offsetting collections are netted against spending, and outlays are reported as the net amount.

Offsetting receipts in receipt accounts cannot be used without appropriation. They are subdivided into three categories: (1) proprietary receipts, or collections from the public, offset against outlays by agency and by function; (2) intragovernmental transactions, or payments into receipt accounts from governmental appropriation or fund accounts. They finance operations within and between Government agencies and are credited with collections from other Government accounts; and (3) offsetting governmental receipts that include foreign cash contributions.

Intrabudgetary transactions are subdivided into three categories: (1) interfund transactions—payments are from one fund group (either Federal funds or trust funds) to a receipt account in the other fund group; (2) Federal intrafund transactions—payments and receipts both occur within the Federal fund group; and (3) trust intrafund transactions—payments and receipts both occur within the trust fund group.

Offsetting receipts are generally deducted from budget authority and outlays by function, subfunction, or agency. There are four types of receipts, however, that are deducted from budget totals as undistributed offsetting receipts. They are: (1) agencies' payments (including payments by *off-budget Federal entities*) as employers into employees' retirement funds; (2) interest received by trust funds; (3) rents and royalties on the Outer Continental Shelf lands; and (4) other interest (i.e., that collected on Outer Continental Shelf money in deposit funds when such money is transferred into the budget).

The Government has used the unified budget concept set forth in the "Report of the President's Commission on Budget Concepts" as a foundation for its budgetary analysis and presentation since 1969. The concept calls for the budget to include all of the Government's fiscal transactions with the public. Since 1971, however, various laws have been enacted removing several Federal entities from (or creating them outside of) the budget. Other laws have moved certain off-budget Federal entities onto the budget. Under current law, the off-budget Federal entities consist of the two Social Security trust funds, Federal Old-Age and Survivors Insurance and the Federal Disability Insurance Trust Fund, and the Postal Service.

Although an off-budget Federal entity's receipts, outlays, and surplus or deficit ordinarily are not subject to targets set by the Congressional resolution, the Balanced Budget and Emergency Deficit Control Act of 1985 [commonly known as the Gramm-Rudman-Hollings Act as amended by the Budget Enforcement Act of 1990 (2 United States Code 900-922)] included off-budget surplus or deficit in calculating deficit targets under that act and in calculating excess deficit. Partly for this reason, attention has focused

on both on- and off-budget receipts, outlays and deficit of the Government.

Tables **FFO-1**, **FFO-2**, and **FFO-3** are published quarterly and cover 5 years of data, estimates for 2 years, detail for 13 months, and fiscal year-to-date data. They provide a summary of data relating to Federal fiscal operations reported by Federal entities and disbursing officers, and daily reports from the FRBs. They also detail accounting transactions affecting receipts and outlays of the Government and off-budget Federal entities and their related effect on assets and liabilities of the Government. Data are derived from the “Monthly Treasury Statement of Receipts and Outlays of the United States Government.”

- Table **FFO-1** summarizes the amount of total receipts, outlays, and surplus or deficit, as well as transactions in Federal securities, monetary assets, and balances in Treasury operating cash.
- Table **FFO-2** includes on- and off-budget receipts by source. Amounts represent income taxes, social insurance taxes, net contributions for other insurance and retirement, excise taxes, estate and gift taxes, customs duties, and net miscellaneous receipts.
- Table **FFO-3** details on- and off-budget outlays by agency.

- Table **FFO-4** summarizes on- and off-budget receipts by source and outlays by function as reported to each major fund group classification for the current fiscal year to date and prior fiscal year to date.

- Table **FFO-5** summarizes internal revenue receipts by states and by type of tax. Amounts reported are collections made in a fiscal year. They span several tax liability years because they consist of prepayments (estimated tax payments and taxes withheld by employers for individual income and Social Security taxes), payments made with tax returns and subsequent payments made after tax returns are due or are filed (that is, payments with delinquent returns or on delinquent accounts).

Amounts are reported based on the primary filing address provided by each taxpayer or reporting entity. For multistate corporations, the address may reflect only the district where such a corporation reported its taxes from a principal office rather than other districts where income was earned or where individual income and Social Security taxes were withheld. In addition, an individual may reside in one district and work in another.

- Table **FFO-6** includes customs collection of duties, taxes, and fees by districts and ports.

Budget Results and Financing of the U.S. Government and Third-Quarter Receipts by Source

Third-Quarter Receipts

The following capsule analysis of budget receipts, by source, for the third quarter of Fiscal Year 2021 supplements fiscal data reported in the June issue of the “Treasury Bulletin.” At the time of that issue’s release, not enough data were available to analyze adequately collections for the quarter.

Note that due to the delay of certain tax payment deadlines under IRS Notices 2020-18 and 2020-23, differences between the third quarter of Fiscal Year 2021 and the third quarter of Fiscal Year 2020 may be unusually large.

Individual income taxes—Individual income tax receipts, net of refunds, were \$766.0 billion for the third quarter of Fiscal Year 2021. This is an increase of \$550.8 billion over the comparable prior year quarter. Withheld receipts increased by \$174.6 billion and non-withheld receipts increased by \$435.5 billion during this period. Refunds increased by \$59.3 billion over the comparable Fiscal Year 2020 quarter. There was an increase of \$49.6 billion in accounting adjustments between individual income tax receipts and the Social Security and Medicare trust funds over the comparable quarter in Fiscal Year 2020.

Corporate income taxes—Net corporate income tax receipts were \$160.8 billion for the third quarter of Fiscal Year 2021. This is an increase of \$152.9 billion compared to the prior year third quarter. This change is due to an increase in estimated and final payments; there was not a significant change in corporate refunds.

Employment taxes and contributions—Employment taxes and contributions receipts for the third quarter of Fiscal Year 2021 were \$314.1 billion, a decrease of \$39.4 billion over the comparable prior year quarter. Receipts to the Federal Old-Age and Survivors Insurance, Federal Disability Insurance, and Federal Hospital Insurance trust funds changed by -\$27.7 billion, -\$4.6 billion, and -\$7.4 billion respectively. There was a -\$43.7 billion accounting adjustment for prior years employment tax liabilities made in the third quarter of Fiscal Year 2021. There was a \$5.9 billion adjustment in the third quarter of Fiscal Year 2020.

Unemployment insurance—Unemployment insurance receipts, net of refunds, for the third quarter of Fiscal Year 2021 were \$23.9 billion, an increase of \$1.3 billion over the comparable quarter of Fiscal Year 2020. Net State taxes deposited in the U.S. Treasury increased by \$1.4 billion to \$20.3 billion. Net Federal Unemployment Tax Act taxes decreased by \$0.1 billion to \$3.5 billion.

Budget Results and Financing of the U.S. Government and Third-Quarter Receipts by Source, continued

Contributions for other insurance and retirement—

Contributions for other retirement were \$1.5 billion for the third quarter of Fiscal Year 2021. This was an increase of \$0.1 billion from the comparable quarter of Fiscal Year 2020.

Excise taxes—Net excise tax receipts for the third quarter of Fiscal Year 2021 were \$19.9 billion, an increase of \$13.2 billion over the comparable prior year quarter. Total excise tax refunds for the quarter were \$2.0 billion, a decrease of \$2.4 billion over the comparable prior year quarter.

Estate and gift taxes—Net estate and gift tax receipts were \$10.0 billion for the third quarter of Fiscal Year 2021.

These receipts represent an increase of \$8.6 billion over the same quarter in Fiscal Year 2020.

Customs duties—Customs duties net of refunds were \$20.7 billion for the third quarter of Fiscal Year 2021. This is an increase of \$8.3 billion over the comparable prior year quarter.

Miscellaneous receipts—Net miscellaneous receipts for the third quarter of Fiscal Year 2021 were \$35.4 billion, a decrease of \$0.2 billion over the comparable prior year quarter. This change is due in part to deposits of earnings by Federal Reserve banks increasing by \$3.4 billion, offset by decreases in other miscellaneous receipts.

INTRODUCTION: Federal Debt

Treasury securities (i.e., public debt securities) comprise most of the Federal debt, with securities issued by other Federal agencies accounting for the rest. Tables in this section of the "Treasury Bulletin" reflect the total. Further detailed information is published in the "Monthly Statement of the Public Debt of the United States." Likewise, information on agency securities and on investments of Federal Government accounts in Federal securities is published in the "Monthly Treasury Statement of Receipts and Outlays of the United States Government."

Treasury's Bureau of the Fiscal Service compiles data in the "Treasury Bulletin" tables FD-2 and FD-6 from the "Monthly Statement of the Public Debt of the United States."

- Table **FD-1** summarizes the Federal debt by listing public debt and agency securities held by the public, including the Federal Reserve. It also includes debt held by Federal agencies, largely by the Social Security and other Federal retirement trust funds. The net unamortized premium and discount also are listed by total Federal securities, securities held by Government accounts and securities held by the public. The difference between the outstanding face value of the Federal debt and the net unamortized premium and discount is classified as the accrual amount. (For greater detail on holdings of Federal securities by particular classes of investors, see the ownership tables, OFS-1 and OFS-2.)

- Table **FD-2** categorizes by type, that is, marketable and nonmarketable, the total public debt securities outstanding that are held by the public.

- In table **FD-3**, nonmarketable Treasury securities held by U.S. Government accounts are summarized by issues to particular funds within Government. Many of the funds invest in par value special series nonmarketables at interest rates determined by law. Others invest in market-based special Treasury securities whose terms mirror those of marketable securities.

- Table **FD-4** presents interest-bearing securities issued by Government agencies. Federal agency borrowing

has declined in recent years, in part because the Federal Financing Bank has provided financing to other Federal agencies. (Federal agency borrowing from Treasury is presented in the "Monthly Treasury Statement of Receipts and Outlays of the United States Government.")

- Table **FD-5** illustrates the average length of marketable interest-bearing public debt held by private investors and the maturity distribution of that debt.

In March 1971, Congress enacted a limited exception to the amount of bonds with rates greater than 4-1/4 percent that could be held by the public. This permitted Treasury to offer securities maturing in more than 7 years at current market interest rates for the first time since 1965. In March 1976, the definition of a bond was changed to include those securities longer than 10 years to maturity. This exception has expanded since 1971, authorizing Treasury to continue to issue long-term securities. The ceiling on Treasury bonds was repealed on November 10, 1988.

The volume of privately held Treasury marketable securities by maturity class reflects the remaining period to maturity of Treasury bills, notes and bonds. The average length is comprised of an average of remaining periods to maturity, weighted by the amount of each security held by private investors. In other words, computations of average length exclude Government accounts and the FRBs.

- In table **FD-6**, the debt ceiling is compared with the outstanding debt subject to limitation by law. The other debt category includes Federal debt Congress has designated as being subject to the debt ceiling.

- Table **FD-7** details Treasury holdings of securities issued by Government corporations and other agencies. Certain Federal agencies are authorized to borrow money from the Treasury, largely to finance direct loan programs. In addition, agencies such as the Bonneville Power Administration are authorized to borrow from the Treasury to finance capital projects. Treasury, in turn, finances these loans by selling Treasury securities to the public.

TABLE FD-1—Summary of Federal Debt

INTRODUCTION: Bureau of the Fiscal Service Operations

Chapter 31 of Title 31 of the United States Code allows the Secretary of Treasury to borrow money by issuing Treasury securities. The Secretary determines the terms and conditions of issue, conversion, maturity, payment, and interest rate. New issues of Treasury notes mature in 2 to 10 years. Bonds mature in more than 10 years from the issue date. Each outstanding marketable security is listed in the "Monthly Statement of the Public Debt of the United States." The information in this section of the "Treasury Bulletin" pertains only to marketable Treasury securities.

The Bureau of the Fiscal Service is a new bureau within the Treasury Department, formed on October 7, 2012, from the consolidation of the Financial Management Service and the Bureau of the Public Debt. Our mission is to promote the financial integrity and operational efficiency of the U.S. government through exceptional accounting, financing, collections, payments, and shared services. As one bureau, the organization is better positioned to help transform financial management and the delivery of shared services in the federal government. The bureau will be a valued partner for agencies as they work to strengthen their own financial management or as they look for a quality service provider who can allow them to focus on their missions.

Table **PDO-1** presents the results of weekly auctions of 4-, 13-, and 26-week bills. Treasury bills mature each Thursday. Issues of 4- and 13-week bills are *reopenings* of 26-week bills. High rates on accepted tenders and the dollar value of total bids are presented, with the dollar value of awards made on both competitive and noncompetitive basis.

To encourage the participation of individuals and smaller institutions, Treasury accepts noncompetitive tenders of up to \$5 million in each auction of securities.

Table **PDO-2** lists the results of auctions of marketable securities, other than weekly bills, in chronological order over the past 2 years. Issues of *cash management* bills also are presented.

Note: On July 31, 2013, Treasury published amendments to its marketable securities auction rules to accommodate the auction and issuance of Floating Rate Notes (FRNs). An FRN is a security that has an interest payment that can change over time. Treasury FRNs will be indexed to the most recent 13-week Treasury bill auction High Rate, which is the highest accepted discount rate in a Treasury bill auction. FRNs will pay interest quarterly.

TREASURY FINANCING: APRIL-JUNE

[Source: Bureau of the Fiscal Service, Division of Financing Operations]

APRIL

Auction of 42-Day Cash Management Bills

On March 25, 2021, Treasury announced it would auction \$40,000 million of 42-day bills. They were issued April 1 and matured May 13. The issue was to raise new cash of approximately \$40,000 million. Treasury auctioned the bills on March 30. Tenders totaled \$118,879 million; Treasury accepted \$40,001 million, including \$14 million of noncompetitive tenders from the public. The high bank discount rate was 0.015 percent.

Auction of 119-Day Cash Management Bills

On March 30, 2021, Treasury announced it would auction \$35,000 million of 119-day bills. They were issued April 6 and will mature August 3. The issue was to raise new cash of approximately \$35,000 million. Treasury auctioned the bills on March 31. Tenders totaled \$122,103 million; Treasury accepted \$35,002 million, including \$2 million of noncompetitive tenders from the public. The high bank discount rate was 0.030 percent.

Auction of 42-Day Cash Management Bills

On April 1, 2021, Treasury announced it would auction \$40,000 million of 42-day bills. They were issued April 8 and matured May 20. The issue was to raise new cash of approximately \$40,000 million. Treasury auctioned the bills on April 6. Tenders totaled \$140,187 million; Treasury accepted \$40,002 million, including \$12 million of noncompetitive tenders from the public. The high bank discount rate was 0.020 percent.

Auction of 119-Day Cash Management Bills

On April 6, 2021, Treasury announced it would auction \$35,000 million of 119-day bills. They were issued April 13 and will mature August 10. The issue was to raise new cash of approximately \$35,000 million. Treasury auctioned the bills on April 7. Tenders totaled \$142,013 million; Treasury accepted \$35,001 million, including \$4 million of noncompetitive tenders from the public. The high bank discount rate was 0.025 percent.

Auction of 42-Day Cash Management Bills

On April 8, 2021, Treasury announced it would auction \$40,000 million of 42-day bills. They were issued April 15 and matured May 27. The issue was to raise new cash of approximately \$40,000 million. Treasury auctioned the bills on April 13. Tenders totaled \$133,555 million; Treasury accepted \$40,002 million, including \$13 million of noncompetitive tenders from the public. The high bank discount rate was 0.015 percent.

Auction of 3-Year Notes

On April 8, 2021, Treasury announced it would auction \$58,000 million of 3-year notes. The issue was to refund \$61,366 million of securities maturing April 15 and to raise new cash of approximately \$58,634 million.

The 3-year notes of Series AM-2024 were dated and issued April 15. They are due April 15, 2024, with interest payable on October 15 and April 15 until maturity. Treasury set an interest rate of 0-3/8 percent after determining which tenders were accepted on a yield auction basis.

Treasury received tenders for the notes before 11:00 a.m. Eastern Time (ET) for noncompetitive tenders and before 11:30 a.m. ET for competitive tenders on April 12. Tenders totaled \$134,436 million; Treasury accepted \$58,000 million. All noncompetitive and successful competitive bidders were allotted securities at the high yield of 0.376 percent with an equivalent price of \$99.997020. Treasury accepted in full all competitive tenders at yields lower than 0.376 percent. Tenders at the high yield were allotted 83.48 percent. The median yield was 0.350 percent, and the low yield was 0.080 percent. Noncompetitive tenders totaled \$53 million. Competitive tenders accepted from private investors totaled \$57,743 million.

In addition to the \$58,000 million of tenders accepted in the auction process, Treasury accepted \$8,904 million from Federal Reserve Banks (FRBs) for their own accounts. The minimum par amount required for Separate Trading of Registered Interest and Principal Securities (STRIPS) of notes of Series AM-2024 is \$100.

Auction of 9-Year 10-Month 1-1/8 Percent Notes

On April 8, 2021, Treasury announced it would auction \$38,000 million of 9-year 10-month 1-1/8 percent notes. The issue was to refund \$61,366 million of securities maturing April 15 and to raise new cash of approximately \$58,634 million.

¹ All 13-week bills represent additional issues of bills with an original maturity of 26 weeks or 52 weeks. Certain 26-week bills represent additional issues of bills with an original maturity of 52 weeks. All 4-week bills represent additional issues of bills with an original maturity of 8 weeks.

² Includes amount awarded to the Federal Reserve System.³ Tenders for \$5 million or less from any one bidder are accepted in full at the high price of accepted competitive bids. All Treasury Marketable auctions are conducted in a single-price format as of November 2, 1998.

⁴ Equivalent coupon-issue yield.

¹ Currently, all issues are sold at auction. For bill issues, the rate shown is the high bank discount rate. For note and bond issues, the rate shown is the interest rate. For details of bill offerings, see table PDO-1. As of October 1, 1997, all Treasury issues of notes and bonds are eligible for STRIPS.

² From date of additional issue in case of a reopening.

³ In reopenings, the amount accepted is in addition to the amount of original offerings.

⁴ Includes securities issued to the Federal Reserve System; and to foreign and international monetary authorities, whether in exchange for maturing securities or for new cash.

Note—Amounts listed as tendered and accepted are amounts tendered and awarded on auction day.

INTRODUCTION: Ownership of Federal Securities

Federal securities presented in the following tables are public debt securities such as savings bonds, bills, notes, and bonds that the Treasury issues. The tables also detail debt issued by other Federal agencies under special financing authorities. [See the Federal debt (FD) tables for a more complete description of the Federal debt.]

Effective January 1, 2001, Treasury's Bureau of the Fiscal Service revised formats, titles, and column headings in the "Monthly Statement of the Public Debt of the United States," Table I: Summary of Treasury Securities Outstanding and Table II: Statutory Debt Limit. These changes should reduce confusion and bring the publication more in line with the public's use of terms.

Treasury's Bureau of the Fiscal Service compiles data in the "Treasury Bulletin" table OFS-1 from the "Monthly Statement of the Public Debt of the United States." Effective June 2001, Bureau of the Fiscal Service revised procedures and categories in this table to agree with the Bureau of the Fiscal Service's publication changes.

- Table **OFS-1** presents Treasury marketable and nonmarketable securities and debt issued by other Federal agencies held by Government accounts, the FRBs, and private investors. Social Security and Federal retirement trust fund investments comprise much of the Government account holdings.

The FRBs acquire Treasury securities in the market as a means of executing monetary policy.

- Table **OFS-2** presents the estimated ownership of U.S. Treasury securities. Information is primarily obtained from the Federal Reserve Board of Governors Flow of Funds data, Table L210. State, local, and foreign holdings include special issues of nonmarketable securities to municipal entities and foreign official accounts. They also include municipal, foreign official, and private holdings of marketable Treasury securities. (See footnotes to the table for description of investor categories.)

⁵ Sources: "Monthly Statement of the Public Debt of the United States from January 1996. From December 2014 to September 2018, includes savings bonds issued to myRA accounts. Current accrual value.

⁶ Includes U.S. Treasury securities held by the Federal Employees Retirement System Thrift Savings Plan "G Fund."

⁷ Includes money market mutual funds, mutual funds, and closed-end investment companies.

⁸ Source: Federal Reserve Board Treasury International Capital Survey. Includes nonmarketable foreign series, Treasury securities, and Treasury deposit funds. Excludes Treasury securities held under repurchase agreements in custody accounts at the Federal Reserve Bank of New York. For additional information, see:

<http://www.treasury.gov/resource-center/data-chart-center/tic/pages/index.aspx>.

⁹ Includes individuals, Government-sponsored enterprises, brokers and dealers, bank personal trusts and estates, corporate and non-corporate businesses, and other investors.

*The "Insurance companies" data presented in Treasury Bulletin issues from December 2018 through June 2021 have been revised. Beginning with the December 2018 TB issue and June 2018 data, ownership data for property-casualty insurance companies was not included in the total, nor were updates to historical data captured due to a change in the FRB Flow of Funds Z.1 release series reporting this data. This new series is now being captured and "Insurance companies" data have been revised back to June 2013.

INTRODUCTION: U.S. Currency and Coin Outstanding and in Circulation

The U.S. Currency and Coin Outstanding and in Circulation (USCC) statement informs the public of the total face value of currency and coin used as a medium of exchange that is in circulation at the end of a given accounting month. The statement defines the total amount of currency and coin outstanding and the portion deemed to be in circulation. It includes some old and current rare issues that do not circulate or that may do so to a limited extent. Treasury includes them in the statement because the issues were originally intended for general circulation.

The USCC statement provides a description of the various issues of paper money. It also gives an estimated average of currency and coin held by each individual, using estimates of population from the Bureau of the Census. USCC information has been published by Treasury since 1888, and was published separately until 1983, when it was incorporated into the "Treasury Bulletin." The USCC comes from monthly reports compiled by Treasury offices, U.S. Mint offices, the Federal Reserve banks (FRBs), and the Federal Reserve Board.

Foreign Currency Positions
Exchange Stabilization Fund

INTRODUCTION: Foreign Currency Positions

The “Treasury Bulletin” reports foreign currency holdings of large foreign exchange market participants. These reports provide information on positions in derivative instruments, such as foreign exchange futures and options that are increasingly used in establishing foreign exchange positions but were not covered in the old reports.

The information is based on reports of large foreign exchange market participants on holdings of five major foreign currencies (Canadian dollar, Japanese yen, Swiss franc, pound sterling, and euro) and the U.S. dollar. Positions in the U.S. dollar, which have been collected since January 1999, are intended to approximate “all other” currency positions of reporting institutions. U.S.-based businesses file a consolidated report for their domestic and foreign subsidiaries, branches, and agencies. U.S. subsidiaries of foreign entities file only for themselves, not for their foreign parents. Filing is required by law (31 United States Code 5315; 31 Code of Federal Regulations 128, Subpart C).

Weekly and monthly reports must be filed throughout the calendar year by major foreign exchange market participants, which are defined as market participants with more than \$50 billion equivalent in foreign exchange contracts on the last business day of any calendar quarter during the previous year (end March, September, September, or December). Such contracts include the amounts of foreign exchange spot contracts bought and sold, foreign exchange forward contracts bought and sold, foreign exchange futures bought and sold, and one half the notional amount of foreign exchange options bought and sold.

A quarterly report must be filed throughout the calendar year by each foreign exchange market participant that had more than \$5 billion equivalent in foreign exchange contracts on the last business day of any quarter the previous year (end March, June, September, or December).

This information is published in six sections corresponding to each of the major currencies covered by the reports. Tables I-1 through VI-1 present the currency data reported weekly by major market participants. Tables I-2 through VI-2 present more detailed currency data of major market participants, based on monthly reports. Tables I-3 through VI-3 present quarterly consolidated currency data reported by large market participants that do not file weekly reports. The information in the tables referenced above is based on the reports referenced in this Introduction: Foreign Currency Positions and is not audited by the Federal Reserve banks or the Treasury Department.

Principal exchanged under cross-currency interest rate swaps is reported as part of purchases or sales of foreign exchange. Such principal also was noted separately on monthly and quarterly reports through December 1998, when this practice was discontinued. The net options position, or the net delta-equivalent value of an options position, is an estimate of the relationship between an option’s value and an equivalent currency hedge. The delta equivalent value is defined as the product of the first partial derivative of an option valuation formula (with respect to the price of the underlying currency) multiplied by the notional principal of the contract.

The data reported herein may occasionally differ with respect to time periods noted in prior issues of this Bulletin due to revisions from reporting market participants that arise from quality assurance controls.

INTRODUCTION: Exchange Stabilization Fund

To stabilize the exchange value of the dollar, the Exchange Stabilization Fund (ESF) was established pursuant to chapter 6, section 10 of the Gold Reserve Act of January 30, 1934 codified at 31 United States Code 5302, which authorized establishment of a Treasury fund to be operated under the exclusive control of the Secretary, with approval of the President.

Subsequent amendment of the Gold Reserve Act modified the original purpose somewhat to reflect termination of the fixed exchange rate system.

Section 4027 of H.R. 748, the Coronavirus Aid, Relief, and Economic Security Act (CARES Act), enacted on March 27, 2020 as Pub. Law 116-136, appropriated \$500 billion to the ESF. The Consolidated Appropriations Act, 2021, subsequently rescinded \$479 billion of the \$500 billion appropriation provided to Treasury.

Resources of the fund include (a) Fund Balance, which reflects the projected subsidy to support future disbursements for loans and expenditures for administrative expenses in support of the CARES Act, (b) U.S. Government securities (dollar balances), (c) special drawing rights -SDRs, and (d) foreign currencies. Principal sources of income -+ or loss -- for the fund are profits -+ or losses -- on SDRs and foreign exchange, interest earned on U.S. Government and foreign securities, and SDRs.

- Table **ESF-1** presents the assets, liabilities, and capital of the fund. The figures are in U.S. dollars. Amounts and transactions pertaining to foreign currencies have been converted to U.S. dollars based on current exchange rates computed according to the accrual method of accounting. Investments and loans receivable are reported at cost. The capital account represents the original capital appropriated to the fund by Congress of \$2 billion, minus a subsequent transfer of \$1.8 billion to pay for the initial U.S. quota subscription to the International Monetary Fund. The additional appropriated capital represents the \$500 billion appropriated under the CARES Act Sec 4027 minus transfers, expenditures, and a subsequent rescission of \$479 billion resulting from the passage of Consolidated Appropriations Act, 2021. Conversion gains and losses are reflected in the cumulative net income -+ or loss -- account.

- Table **ESF-2** shows the results of operations for the current quarter and year-to-date. Figures are in U.S. dollars computed according to the accrual method. “Profit -+ or loss -- on foreign exchange” includes realized profits or losses. “Adjustment for change in valuation of SDR holdings and allocations” reflects net gain or loss on revaluation of SDR holdings and allocations for the quarter. CARES Act related administrative costs incurred in connection with the loans, loan guarantees and other investments are accrued.

Net income (+) or loss (-)	<hr style="border-top: 3px double black;"/>	<hr style="border-top: 3px double black;"/>

¹ Beginning July 1974, the International Monetary Fund adopted a technique for valuing the SDRs based on a weighted average of exchange rates for the currencies of selected member countries. The U.S. SDR holdings and allocations are valued on this basis beginning July 1974.

Note—Annual balance sheets for fiscal years 1934 through 1940 appeared in the 1940 "Annual Report of the Secretary of the Treasury" and those for succeeding years appeared in subsequent reports through 1980. Quarterly balance sheets beginning with December 31, 1938, have been published in the "Treasury Bulletin." Data from inception to September 30, 1978, may be found on the statements published in the January 1979 "Treasury Bulletin."

SPECIAL REPORTS

Trust Funds

TABLE TF-6A—Highway Trust Fund

The following information is released according to the provisions of the Byrd Amendment [codified at 26 United States Code 9503(d)] and represents data concerning the Highway Trust Fund.

The 48-month revenue estimates for the highway and mass transit accounts, respectively, include the latest estimates received from Treasury's Office of Tax Analysis for excise taxes, net of refunds.

Highway Account

[In billions of dollars. Source: DOT]

Commitments (unobligated balances plus unpaid obligations, fiscal year 2023)	81
less:	
Cash balance (fiscal year 2023)	-21
Unfunded authorizations (fiscal year 2023)	102
48-month revenue estimate (fiscal years 2024, 2025, 2026, and 2027).....	142

Note—Detail may not add due to rounding.

48-month revenue estimate reflects FY 2022 President's Budget projections.

Note—Reflects extension of authorized revenue collection and funding levels prescribed in P.L. 114-94.

Mass Transit Account

[In billions of dollars. Source: DOT]

Commitments (unobligated balances plus unpaid obligations, fiscal year 2023)	35
less:	
Cash balance (fiscal year 2023)	-5
Unfunded authorizations (fiscal year 2023)	40
48-month revenue estimate (fiscal years 2024, 2025, 2026, and 2027).....	25

Note—Detail may not add due to rounding.

48-month revenue estimate reflects FY 2022 President's Budget projections.

Note—Reflects extension of authorized revenue collection and funding levels prescribed in P.L. 114-94.

Glossary

With References to Applicable Sections and Tables

Source: Bureau of the Fiscal Service

Amounts outstanding and in circulation (USCC)—Includes all issues by the Bureau of the Mint purposely intended as a medium of exchange. Coins sold by the Bureau of the Mint at premium prices are excluded; however, uncirculated coin sets sold at face value plus handling charge are included.

Average discount rate (PDO-1, -2)—In Treasury bill auctions, purchasers tender competitive bids on a discount rate basis. The average discount rate is the weighted, or adjusted, average of all bids accepted in the auction.

Budget authority (“Federal Fiscal Operations”)—Congress passes laws giving budget authority to Government entities, which gives the agencies the power to spend Federal funds. Congress can stipulate various criteria for the spending of these funds. For example, Congress can stipulate that a given agency must spend within a specific year, number of years, or any time in the future.

The basic forms of budget authority are appropriations, authority to borrow, contract authority, and authority to obligate and expend offsetting receipts and collections. The period of time during which Congress makes funds available may be specified as 1-year, multiple-year, or no-year. The available amount may be classified as either definite or indefinite; a specific amount or an unspecified amount can be made available. Authority also may be classified as current or permanent. Permanent authority requires no current action by Congress.

Budget deficit—The total, cumulative amount by which budget outlays (spending) exceed budget receipts (income).

Cash management bills (PDO-1)—Marketable Treasury bills of irregular maturity lengths, sold periodically to fund short-term cash needs of Treasury. Their sale, having higher minimum and multiple purchase requirements than those of other issues, is generally restricted to competitive bidders.

Competitive tenders (“Treasury Financing Operations”)—A bid to purchase a stated amount of one issue of Treasury securities at a specified yield or discount. The bid is accepted if it is within the range accepted in the auction. (See Noncompetitive tenders.)

Currency no longer issued (USCC)—Old and new series gold and silver certificates, Federal Reserve notes, national bank notes, and 1890 Series Treasury notes.

Debt outstanding subject to limitation (FD-6)—The debt incurred by the Treasury subject to the statutory limit set by Congress. Until World War I, a specific amount of debt was authorized to each separate security issue. Beginning with the

Second Liberty Loan Act of 1917, the nature of the limitation was modified until, in 1941, it developed into an overall limit on the outstanding Federal debt.

Pursuant to 31 U.S.C. 3101(b). By the Continuing Appropriations Act, 2018 and Bipartisan Budget Act, 2018, Public Law 115-119, the Statutory Debt Limit was suspended through March 1, 2019.

Discount—The interest deducted in advance when purchasing notes or bonds. (See Accrued discount.)

Discount rate (PDO-1)—The difference between par value and the actual purchase price paid, annualized over a 360-day year. Because this rate is less than the actual yield (coupon-equivalent rate), the yield should be used in any comparison with coupon issue securities.

Dollar coins (USCC)—Include standard silver and nonsilver coins.

Domestic series (FD-2)—Nonmarketable, interest- and non-interest-bearing securities issued periodically by Treasury to the Resolution Funding Corporation (RFC) for investment of funds authorized under section 21B of the Federal Home Loan Bank Act (12 United States Code 1441b).

Federal intrafund transactions (“Federal Fiscal Operations”)—Intrabudgetary transactions in which payments and receipts both occur within the same Federal fund group (Federal funds or trust funds).

Federal Reserve notes (USCC)—Issues by the U.S. Government to the public through the Federal Reserve banks and their member banks. They represent money owed by the Government to the public. Currently, the item “Federal Reserve notes—amounts outstanding” consists of new series issues. The Federal Reserve note is the only class of currency currently issued.

Foreign-targeted issue (PDO-2)—Foreign-targeted issues were notes sold between October 1984 and February 1986 to foreign institutions, foreign branches of U.S. institutions, foreign central banks or monetary authorities, or to international organizations in which the United States held membership. Sold as companion issues, they could be converted to domestic (normal) Treasury notes with the same maturity and interest rates. Interest was paid annually.

Government account series (FD-2)—Certain trust fund statutes require the Secretary of the Treasury to apply monies held by these funds toward the issuance of nonmarketable special securities. These securities are sold directly by

Treasury to a specific Government agency, trust fund, or account. Their rate is based on an average of market yields on outstanding Treasury obligations, and they may be redeemed at the option of the holder. Roughly 80 percent of these are issued to five holders: the Federal Old-Age and Survivors Insurance Trust Fund; the civil service retirement and disability fund; the Federal Hospital Insurance Trust Fund; the military retirement fund; and the Unemployment Trust Fund.

Interfund transactions (“Federal Fiscal Operations”)—Transactions in which payments are made from one fund group (either Federal funds or trust funds) to a receipt account in another group.

International Monetary Fund transactions (“Exchange Stabilization Fund”, ESF-1)—(IMF) Established by the United Nations, the IMF promotes international trade, stability of exchange, and monetary cooperation. Members are allowed to draw from the fund.

Intrabudgetary transactions (“Federal Fiscal Operations”)—These occur when payment and receipt both occur within the budget, or when payment is made from off-budget Federal entities whose budget authority and outlays are excluded from the budget totals.

Noncompetitive tenders (“Treasury Financing Operations”)—This is a tender or bid to purchase a stated par amount of securities at the highest yield or discount rate awarded to competitive bidders for a single-price auction.

Obligations (“Federal Fiscal Operations”)—An unpaid commitment to acquire goods or services.

Off-budget Federal entities (“Federal Fiscal Operations”)—Federally owned and controlled entities whose transactions are excluded from the budget totals under provisions of law. Their receipts, outlays, and surplus or deficit are not included in budget receipts, outlays, or deficits. Their budget authority is not included in totals of the budget.

Outlays (“Federal Fiscal Operations”)—Payments on obligations in the form of cash, checks, the issuance of bonds or notes, or the maturing of interest coupons.

Par value—The face value of bonds or notes, including interest.

Quarterly financing (“Treasury Financing Operations”)—Treasury has historically offered packages of several “coupon” security issues on the 15th of February, May, August, and November, or on the next working day. These issues currently consist of a 3-year note, a 10-year note, and a 30-year bond. Treasury sometimes offers additional amounts of outstanding long-term notes or bonds, rather than selling new security issues. (See Reopening.)

Fractional coins (USCC)—Coins minted in denominations of 50, 25, and 10 cents, and minor coins (5 cents and 1 cent).

Receipts (“Federal Fiscal Operations”)—Funds collected from selling land, capital, or services, as well as collections from the public (budget receipts), such as taxes, fines, duties, and fees.

Reopening (PDO-2)—The offer for sale of additional amounts of outstanding issues, rather than an entirely new issue. A reopened issue will always have the same maturity date, CUSIP-number, and interest rate as the original issue.

Special drawing rights (“Exchange Stabilization Fund,” ESF-1)—International assets created by IMF that serve to increase international liquidity and provide additional international reserves. SDRs may be purchased and sold among eligible holders through IMF. (See IMF.)

SDR allocations are the counterpart to SDRs issued by IMF based on members’ quotas in IMF. Although shown in Exchange Stabilization Fund (ESF) statements as liabilities, they must be redeemed by ESF only in the event of liquidation of, or U.S. withdrawal from, the SDR department of IMF or cancellation of SDRs.

SDR certificates are issued to the Federal Reserve System against SDRs when SDRs are legalized as money. Proceeds of monetization are deposited into an ESF account at the Federal Reserve Bank of New York.

Spot (“Foreign Currency Positions”)—Due for receipt or delivery within 2 workdays.

State and local government series (SLGS) (FD-2)—Special nonmarketable certificates, notes, and bonds offered to State and local governments as a means to invest proceeds from their own tax-exempt financing. Interest rates and maturities comply with IRS arbitrage provisions. SLGS are offered in both time deposit and demand deposit forms. Time deposit certificates have maturities of up to 1 year. Notes mature in 1 to 10 years and bonds mature in more than 10 years. Demand deposit securities are 1-day certificates rolled over with a rate adjustment daily.

Statutory debt limit (FD-6)—By Act of Congress there is a limit, either temporary or permanent, on the amount of public debt that may be outstanding. When this limit is reached, Treasury may not sell new debt issues until Congress increases or extends the limit. For a detailed listing of changes in the limit since 1941, see the Budget of the United States Government. (See debt outstanding subject to limitation.)

STRIPS (PDO-2)—Separate Trading of Registered Interest and Principal Securities. Long-term notes and bonds may be divided into principal and interest-paying components, which may be transferred and sold in amounts as small as \$1,000. STRIPS are sold at auction at a minimum par amount, varying for each issue. The amount is an arithmetic function of the issue’s interest rate.

Treasury bills—The shortest term Federal security (maturity dates normally varying from 3 to 12 months), are sold at a discount.

Trust fund transaction (“Federal Fiscal Operations”)—An intrabudgetary transaction in which both payments and receipts occur within the same trust fund group.

United States—Includes the 50 States, District of Columbia, Commonwealth of Puerto Rico, American Samoa, Midway Island, Virgin Islands, Wake Island, and all other territories and possessions.

U.S. notes (USCC)—Legal tender notes of five different issues: 1862 (\$5-\$1,000 notes); 1862 (\$1-\$2 notes); 1863 (\$5-\$1,000 notes); 1863 (\$1-\$10,000 notes); and 1901 (\$10 notes).
