1/ Beginning July 1940, amounts representing appropriations equal to collections of Social Security taxes under the Federal Insurance Contributions Act for old-age insurance (less reimbursements to the General Fund of the Treasury for administrative expenses) have been deducted from total budget receipts in the Daily Treasury Statement to arrive at a figure called net receipts. Such deduction items are reflected under trust account receipts as net appropriations to the Federal Old-Age and Survivors Insurance Trust Fund. In the above statement, similar treatment has been accorded net transfers to the Federal Old-Age and Survivors Insurance Trust Fund (formerly Old-Age Reserve Account) made during the fiscal years 1936 to 1940, in order to facilitate comparison with later periods.

2/ Excludes public debt retirements.

3/ Total expenditures less net receipts.

1/ In the fiscal years 1935 and 1936, \$91 millions and \$554 millions, respectively, were transferred from increment on gold to the working balance for retirement of national bank notes. In this statement, however, charges for retirement of national bank notes are reflected directly against increment on gold in the years during which the retirements were actually made. Inactive gold in the amount of \$1,087 millions for the fiscal year 1937 is considered as a part of the working balance.

In this statement, however, charges for retirement of national bank notes are reflected directly against increment on gold, in the years during which the retirements were actually made. Inactive gold in the amount of \$1,087 millions for the fiscal year 1937 is considered as a part of the working balance general and special accounts for the purpose of this table.

New Yield Average for Long-Term Taxable Treasury Bonds

Since the issuance on October 20, 1941 of the 2-1/2 percent Treasury bonds of 1967-72 there have been outstanding two taxable Treasury bonds not callable for 12 years. Consequently, an average of the yields of long-term taxable Treasury bonds, corresponding to that for long-term partially tax-exempt Treasury bonds, has been set up beginning with that date and is presented for the first time in this issue of the "Treasury Bulletin".

The new index at its date of commencement stood at 2.24 percent, as compared with 1.89 percent for the index of long-term partially tax-exempt Treasury bonds, a differential of 0.35 percent. This differential is due to two factors:

(1) The bonds included in the taxable bond index have an average term four years and ten months longer with respect to first call date and four years and four months longer with respect to final maturity date than the bonds included in the partially tax-exempt index. In view of the present pattern of interest rates, this longer average maturity on the part of the taxable bonds naturally results in a higher average yield than that for the partially tax-exempt bonds.

(2) The remainder of the differential between the indices is accounted for by the difference between the tax-exemption characteristics of the two classes of issues. This portion of the differential is, in turn, compounded of two elements:

- (a) The higher yield of the taxable bonds because of their greater subjectation to Federal income taxation, and
- (b) The enhanced scarcity value of the outstanding partially tax-exempt bonds due to the fact that they are no longer being issued.

Basis of Computation: (1) Treasury bond yields are computed on the basis of the mean of bid and ask quotations in the over-the-counter market, beginning September 2, 1941; previously, closing prices on the New York Stock Exchange were used on days when sales took place on the Exchange in a particular issue and the mean of closing bid and ask quotations on the New York Stock Exchange on days when no sales took place. (2) Corporate bond yields are computed on the basis of closing prices on the New York Stock Exchange and the New York Curb Exchange; on days when an issue does not sell, the price of the last preceding sale is used.

Back Figures: See "Treasury Bulletin" for July 1941, pages 21-26, and subsequent issues.

YIELDS OF TREASURY BONDS AND NOTES NOV. 15, 1941

Based on Mean of Closing Bid and Asked Quotations

Note For callable bonds, yields are computed to, and issues plotted as of, the earliest call date if the bond is selling below par. The smooth curves are fitted by eye and as of the final maturity date if the bond is selling above par. Dollar amounts shown in descriptions of issues are in millions. Issues for which an exchange offer has been made and has expired are excluded. The yields of taxable securities are not reflected by the curves.

OWNERSHIP OF GOVERNMENT SECURITIES

Ownership of the 2½ Percent Treasury Bonds of 1967-72

The following table presents data on shifts in the ownership of the new 2-1/2 percent Treasury Bonds of 1967-72 between their original allotment and October 31, 1941. These bonds were offered by the Secretary of the Treasury on October 9, 1941 for cash subscription and in exchange for approximately \$204 millions of Treasury notes maturing on December 15, 1941 of which \$189 millions were tendered for exchange. Subscription books for the receipt of cash subscriptions were closed as of the close of business on October 9. For the receipt of exchange subscriptions the books were closed on October 10.

Data in the first column of the table are estimates of ownership as of the date of closing of the subscription books and are based on a tabulation of the allotments made on the subscriptions received. Data in the second column of the table are estimates of ownership as of October 31 and are based upon a preliminary tabulation from the Treasury survey of the ownership of securities issued or guaranteed by the United States covering information submitted by 7,000 banks and insurance companies. For this purpose, it was assumed that the institutions covered in the survey held the same proportionate share of the 1967-72 issue held by all institutions as in the case of the total holdings of Government securities for each class of investors covered. Commercial banks covered in the survey account for approximately 95 percent of the holdings of the United States Government and Government-guaranteed securities held by all banks in the United States; the mutual savings banks for 97 percent of the holdings of all mutual savings banks, and the insurance companies for 99 percent of the holdings of all insurance companies.

^{1/} Comprises criminal cases of the Alcohol Tax Unit of the Bureau of Internal Revenue, the Bureau of Customs, the Bureau of Narcotics, the Secret Service Division, and the income tax and miscellaneous tax cases referred by the Penal Division of the Bureau of Internal Revenue to the Department of Justice with recommendation for criminal prosecution.

^{2/} Comprises cases transferred to state, local, or other authorities for prosecution and cases closed because of duplicate prosecutions.

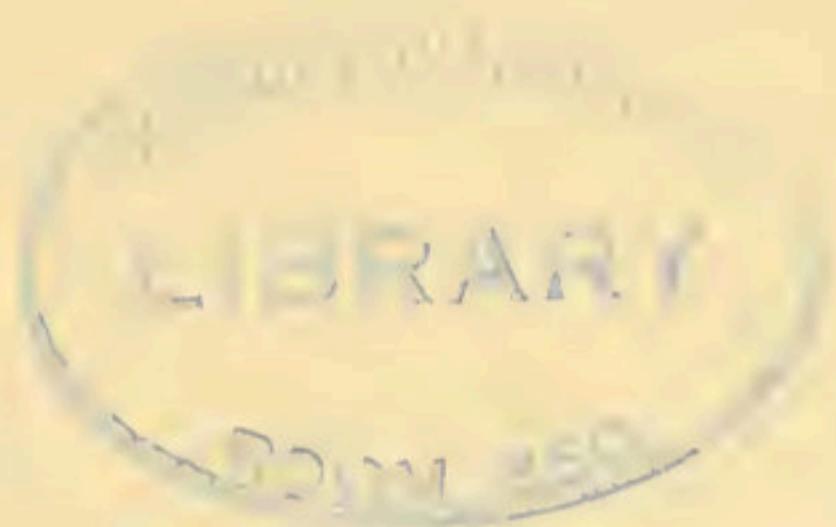

^{3/} Cases "otherwise disposed of" consist of Customs and Narcotics cases in which no arrests were made and Secret Service cases which were disposed of by lunacy hearings.

^{4/} Percentages do not add to 100 because a single conviction may involve more than one type of sentence.

^{5/} Alcohol Tax Unit figures are based on cases in which a suspended or probationary sentence only was imposed.
